

DEFIANCE^{ETFS}

Defiance Daily Target 2X Short QBTS ETF (QBTZ)

listed on The Nasdaq Stock Market, LLC

March 6, 2026

Supplement to the Prospectus dated June 17, 2025

The Board of Trustees of Tidal Trust II (“Trust”) has approved a reverse stock split of the issued and outstanding shares of the Defiance Daily Target 2X Short QBTS ETF (the “Fund”). Effective March 23, 2026 (the “Effective Date”), the Fund will effect a reverse split of its issued and outstanding shares as follows:

Reverse Split Ratio	Approximate decrease in total number of outstanding shares
1:3	66.67%

As of the Effective Date, the Fund’s CUSIP will change as noted in the table below:

Old CUSIP	New CUSIP
88636V645	88636W148

As a result of the reverse split, shareholders of the Fund will receive one share for the number of shares indicated in the applicable ratio. For example, a 1-for-3 split means every three pre-split shares will be combined into one post-split share.

The total market value of each investor’s holdings will remain unchanged immediately following the reverse split, as the share price will adjust proportionally to reflect the reduced number of shares.

No action is required by current shareholders. The Depository Trust Company (“DTC”) will handle the split automatically, and updated share balances will appear in shareholder accounts following the Effective Date.

Redemption of Fractional Shares and Tax Consequences of the Reverse Split

The reverse split may result in a shareholder holding a fractional share of the Fund. However, fractional shares cannot trade on the Fund’s exchange. Depending on the policies of a shareholder’s broker, shareholders who otherwise would be entitled to receive fractional shares may instead receive an amount of cash equivalent to the value of a fraction of one share to which such holder would otherwise be entitled. Please consult your broker about its policies regarding fractional shares. The redemption of such fractional shares may have tax implications for those shareholders, and a shareholder could recognize a gain or a loss in connection with the redemption of the shareholder’s fractional shares. Otherwise, the reverse split is not expected to result in a taxable transaction for Fund shareholders. Please consult your tax advisor about the potential tax consequences. No transaction fee will be imposed on shareholders for the redemption of fractional shares.

Please retain this Supplement for future reference.

PROSPECTUS

June 17, 2025

The U.S. Securities and Exchange Commission (the “SEC”) has not approved or disapproved of these securities or passed upon the accuracy or adequacy of this Prospectus. Any representation to the contrary is a criminal offense.

Each Fund seeks daily leveraged inverse investment results and is intended to be used as a short-term trading vehicle. Each Fund attempts to provide daily investment results that correspond to two times the inverse (or opposite) of the performance of an underlying security.

Each Fund seeks daily inverse leveraged investment results and is intended to be used as a short-term trading vehicle. Each Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios.

Each Fund is very different from most mutual funds and exchange-traded funds. Investors should note that:

- (1) A Fund is riskier than alternatives that do not use leverage because the Fund magnifies the performance of its underlying security.
- (2) A Fund pursues a daily investment objective that is inverse to the performance of its underlying security, a result opposite of most mutual funds and ETFs.
- (3) The pursuit of its daily investment objective means that the return of a Fund for a period longer than a full trading day will be the product of a series of daily leveraged inverse returns, for each trading day during the relevant period.

As a consequence, especially in periods of market volatility, the volatility of the underlying security may affect the Fund’s return as much as, or more than, the return of the underlying security. Further, the return for investors that invest for periods less than a full trading day will not be the product of the return of the Fund’s stated daily leveraged inverse investment objective and the performance of the underlying security for the full trading day. During periods of high volatility, a Fund may not perform as expected and a Fund may have losses when an investor may have expected gains if a Fund is held for a period that is different than one trading day.

The Funds are not suitable for all investors. Each Fund is designed to be utilized only by sophisticated investors, such as traders and active investors employing dynamic strategies. Investors in the Funds should:

- (1) understand the risks associated with the use of leveraged inverse strategies;
- (2) understand the consequences of seeking daily leveraged inverse investment results; and
- (3) intend to actively monitor and manage their investments.

Investors who do not understand a Fund, or do not intend to actively manage their funds and monitor their investments, should not buy the Fund. There is no assurance that any Fund will achieve its daily inverse leveraged investment objective and an investment in a Fund could lose money. The Funds are not a complete investment program. The Funds’ investment adviser will not attempt to position the Funds portfolio to ensure that the Funds do not gain or lose more than a maximum percentage of their net asset value on a given trading day. As a consequence, if the share price of a Fund’s underlying security increases by more than 50% on a given trading day, a Fund’s investors would lose all of their money.

DEFIANCE DAILY TARGET 2X SHORT RGTI ETF - FUND SUMMARY

Important Information About the Fund

The Defiance Daily Target 2X Short RGTI ETF (the “Fund”) seeks daily inverse investment results of -2 times (-200%) the daily percentage change of the common stock of Rigetti Computing, Inc. (Nasdaq: RGTI) (the “Underlying Security”). Because the Fund seeks daily 200% *inverse* investment results, it is very different from most other exchange-traded funds. It is also riskier than alternatives that do not use a short strategy. The return for investors that invest for periods longer or shorter than a trading day should not be expected to be -200% the performance of the Underlying Security for the period. The return of the Fund for a period longer than a trading day will be the result of each trading day’s compounded return over the period, which will very likely differ from -200% the return of the Underlying Security for that period. Longer holding periods, higher volatility of the Underlying Security and leverage increase the impact of compounding on an investor’s returns. During periods of higher underlying security volatility, the volatility of the Underlying Security may affect the Fund’s return as much as, or more than, the return of the Underlying Security.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking 200% daily inverse (-2X) investment results, understand the risks associated with the use of leverage, and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single day, the Fund will lose money if the Underlying Security’s performance is flat, and it is possible that the Fund will lose money even if the Underlying Security’s performance decreases over a period longer than a single day. An investor could lose the full principal value of his/her investment within a single day.

Investment Objective

The Fund seeks daily inverse investment results, before fees and expenses, of -2 times (-200%) the daily percentage change in the share price of Rigetti Computing, Inc. (Nasdaq: RGTI) The Fund does not seek to achieve its stated investment objective for a period other than a single trading day.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.29%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ⁽²⁾	<u>0.00%</u>
Total Annual Fund Operating Expenses ⁽³⁾	<u>1.29%</u>

(1) The Fund’s adviser will pay, or require a sub-adviser to pay, all of the Fund’s expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the “1940 Act”), litigation expenses, and other non-routine or extraordinary expenses.

(2) Based on estimated amounts for the current fiscal year.

(3) The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the

same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year \$131	3 Years \$409
------------------------	-------------------------

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange traded fund that attempts to achieve 2 times the inverse (-200%) of the daily percentage change in the price of the Underlying Security by employing derivatives, namely swap agreements and/or listed options contracts. The Fund aims to generate 2 times the inverse of the daily performance of the Underlying Security for a single day, and not for any other period. A “single day” is defined as being calculated “from the close of regular trading on one trading day to the close on the next trading day.” The Fund is classified as “non-diversified” under the 1940 Act.

If the Fund encounters limitations in implementing its strategies, whether due to market conditions, derivative availability, counterparty issues, or other factors, **the Fund may not achieve investment results, before fees and expenses, that correspond to 2 times the inverse (-2x) the daily performance of the Underlying Security, and may return substantially less during such periods. During such periods, the Fund’s actual leverage levels may differ substantially from its intended target, both intraday and at the close of trading, potentially resulting in significantly lower returns.**

The Fund may enter into swap agreements as a substitute for directly shorting the Underlying Security. The Fund will enter into one or more swap agreements with major financial institutions for a specified period ranging from one day to more than one year whereby the Fund and the financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on the Underlying Security. The gross return (meaning the return before deducting any fees or expenses) to be exchanged or “swapped” between the parties is calculated with respect to a “notional amount,” (meaning the face amount of the instrument) e.g., the return on or change in value of a particular dollar amount representing the Underlying Security. At the end of each day, the Fund’s swaps are valued using market valuations and the Fund’s investment adviser rebalances the Fund’s holdings in an attempt to maintain short exposure for the Fund equal to -200% of the Underlying Security. This daily rebalancing is expected to result in high portfolio turnover.

The Fund may also utilize listed options to seek to achieve leveraged -2X exposure to the Underlying Security. The Fund will primarily employ short-dated (a month or less) in-the-money call options (options with strike prices below the current market price of the Underlying Security, offering immediate intrinsic value). Additionally, the Fund may use other option strategies to produce similar exposure to the Underlying Security, like buying calls and selling puts with identical strike prices. These options allow the Fund to adjust its leverage strategy in response to market conditions, liquidity constraints, or other factors that may affect the availability or pricing of swap agreements. The use of listed options provides additional flexibility in pursuing the Fund’s daily investment objective. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics. However, the use of option contracts is typically less efficient than swaps and may increase the likelihood that the Fund is unable to achieve its daily -2X objective.

For examples of a hypothetical investment in the Fund, see “*Additional Information About the Fund – Principal Investment Strategies*” below.

Fund performance for periods greater than one single day is primarily (but not solely) a function of the following factors: a) the Underlying Security volatility; b) the Underlying Security performance; c) period of time; d) financing rates associated with inverse exposure; and e) other Fund expenses.

The Fund may invest in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short term bond ETFs; and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality as determined by the investment adviser as collateral for the Fund’s derivative positions.

The Fund has adopted a policy to have at least 80% of its net assets, plus borrowings for investment purposes, in financial instruments with economic characteristics that should provide 2 times the inverse exposure to the daily performance of the Underlying Security. For purposes of the 80% policy, derivatives will be valued at notional value.

Due to the Fund's investment strategy, the Fund's investment exposure is concentrated in the industry assigned to the Underlying Security. As of the date of the Prospectus, RGTI is assigned to the semiconductor & semiconductor equipment industry.

The Fund is expected to allocate between 40% and 75% of its assets as collateral for swap agreements or as premiums for purchased options contracts.

Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single day will be the result of each day's returns compounded over the period, which will very likely differ from -200% of the return of the Underlying Security over the same period. The Fund will lose money if the Underlying Security's performance is flat over time, and as a result of daily rebalancing, the Underlying Security volatility and the effects of compounding, the Fund may lose money over time while the Underlying Security's performance decreases over a period longer than a single day. As a consequence, investors should not plan to hold shares of a Fund unmonitored for periods longer than a single trading day.

RGTI

This prospectus relates only to the Fund Shares offered hereby and is not a prospectus for the shares of Rigetti Computing, Inc. (Nasdaq: RGTI).

RGTI designs and develops integrated quantum computing systems and software to solve complex problems across industries such as finance, healthcare, and artificial intelligence. The company leverages its proprietary quantum processors and cloud-based platform to deliver quantum computing as a service (QCaaS) for commercial and research applications. RGTI is listed on the Nasdaq Capital Market ("Nasdaq"). Per RGTI's most recent Form 10-K filing, the aggregate market value of the voting and non-voting common stock held by non-affiliates of RGTI (based on the closing price of its common stock on June 28, 2024 on the Nasdaq Capital Market) was approximately \$166.0 million.

RGTI is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by RGTI pursuant to the Exchange Act can be located by reference to SEC file number 001-40140 through the SEC's website at www.sec.gov. In addition, information regarding RGTI may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of RGTI or other securities of Rigetti Computing, Inc. The Fund has derived all disclosures contained in this document regarding RGTI from the publicly available documents. None of the Fund, the Trust, or the Adviser, or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to RGTI. None of the Fund, the Trust, or the Adviser, or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding RGTI is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of RGTI (and therefore the share price of the Fund at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning RGTI could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser, or their respective affiliates makes any representation to you as to the performance of RGTI.

NONE OF THE FUND, TIDAL TRUST II, AND TIDAL INVESTMENTS LLC ARE AFFILIATED WITH THE UNDERLYING SECURITY.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its investment objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Fund — Principal Risks of Investing in the Fund."

RGTI Price Appreciation Risk. As part of the Fund’s inverse investment strategy, the Fund purchases and sells swap contracts and options contracts that are based on the share price of RGTI common stock (the “Underlying Security”). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund’s indirect -2X exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security’s share price **increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

- *Indirect Investment in RGTI Risk.* Rigetti Computing, Inc. is not affiliated with the Trust, the Fund, the Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Rigetti Computing, Inc., but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.
- *RGTI Good Performance Risk.* RGTI may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. RGTI regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. RGTI’s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If RGTI’s guidance is accurate or varies positively from actual results, RGTI’s share price could increase significantly and, as a result, the Fund may suffer significant losses.
- *Industry Recognition and Analyst Coverage Risk.* Positive recognition from industry analysts, awards for product excellence, or inclusion in prestigious industry reports can enhance RGTI’s reputation and credibility among investors. Favorable analyst ratings, upgrades, or bullish forecasts for the company’s future performance can drive investor enthusiasm and contribute to a rise in RGTI’s stock price.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security, may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole. Additionally, the Fund will seek to employ its investment strategy as it relates to the underlying issuer regardless of whether the company has strong earnings reports, or provides positive future guidance, dividend increases, share buybacks, or engages in strategic acquisitions and product launches. Additionally, the Fund will seek to employ its investment strategy as it relates to the underlying issuer regardless of whether there are favorable industry trends, regulatory approvals, analyst upgrades, strategic partnerships, debt reduction, or improved economic conditions.

Compounding and Market Volatility Risk. The Fund’s performance for periods greater than a trading day will be the result of each day’s returns compounded over the period, which is likely to differ from -200% of the Underlying Security’s performance, before fees and expenses. Compounding has a significant impact on funds that are inverse leveraged and that rebalance daily. The impact of compounding becomes more pronounced as volatility and holding periods increase and will impact each shareholder differently depending on the period of time an investment in the Fund is held and the volatility of the Underlying Security during the shareholder’s holding period of an investment in the Fund.

The chart below provides examples of how Underlying Security volatility could affect the Fund’s performance. Fund performance for periods greater than one single day can be estimated given any set of assumptions for the following factors: a) Underlying Security volatility; b) Underlying Security’s performance; c) period of time; d) financing rates associated with leveraged exposure; e) other Fund expenses; and f) the Underlying Security’s dividends. The chart below illustrates the impact of two principal factors – Underlying Security volatility and performance – on Fund performance. The chart shows estimated Fund returns for a number of combinations of Underlying Security volatility and performance over a one-year period. Performance shown in the chart assumes that (i) there were no Fund expenses; and (ii) borrowing rates (needed to obtain a leveraged short exposure) of 0%. If Fund expenses and/or actual borrowing/lending rates were reflected, the estimated returns would be lower than those shown. Particularly during periods where the Underlying Security experiences higher volatility, compounding will cause results for periods longer than a trading day to vary from -200% of the performance of the Underlying Security.

As shown in the chart below, the Fund would be expected to lose 17.10% if the Underlying Security provided no return over a one-year period during which the Underlying Security experienced annualized volatility of 25%. At higher ranges of volatility, there is a chance of a significant loss of value in the Fund, even if the Underlying Security return is flat.

For instance, if the Underlying Security’s annualized volatility is 100%, the Inverse Fund would be expected to lose 95% of its value, even if the cumulative Underlying Security’s return for the year was 0%. Areas shaded red (or dark gray) represent those scenarios where the Inverse Fund can be expected to return less than -200% of the performance of the Underlying Security and those shaded green (or light gray) represent those scenarios where the Fund can be expected to return more than -200% of the performance of the Underlying Security. The Inverse Fund’s actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in “Tracking Error Risk” below.

One year performance of the stock	-200% of one year performance of the stock	Volatility Rate (Annualized)				
		10%	25%	50%	75%	100%
Return	Return					
-60%	120%	506.50%	418.10%	195.20%	-6.80%	-68.90%
-50%	100%	288.20%	231.60%	88.20%	-26.00%	-80.10%
-40%	80%	166.90%	130.30%	31.20%	-45.60%	-86.10%
-30%	60%	98.10%	69.20%	-3.60%	-62.20%	-89.90%
-20%	40%	51.60%	29.50%	-26.20%	-71.10%	-92.20%
-10%	20%	19.80%	2.30%	-41.70%	-77.20%	-93.90%
0%	0%	-3.00%	-17.10%	-52.80%	-81.50%	-95.00%
10%	-20%	-19.80%	-31.50%	-61.00%	-84.70%	-95.90%
20%	-40%	-32.60%	-42.40%	-67.20%	-87.20%	-96.50%
30%	-60%	-42.60%	-50.90%	-72.00%	-89.10%	-97.10%
40%	-80%	-50.50%	-57.70%	-75.90%	-90.60%	-97.50%
50%	-100%	-56.90%	-63.20%	-79.00%	-91.80%	-97.80%
60%	-120%	-62.10%	-67.60%	-81.50%	-92.80%	-98.10%

The Underlying Security’s annualized historical volatility rate for the period from April 22, 2021 to May 21, 2025 (the longest period available) was 129.33%. The Underlying Security’s highest volatility rate for any one calendar year during this period was 142.06%. The Underlying Security’s annualized performance during this period was 63.08%. Historical Underlying Security volatility and performance are not indications of what Underlying Security volatility and performance will be in the future.

Daily Correlation/Tracking Risk. There is no guarantee that the Fund will achieve a high degree of inverse correlation to the Underlying Security and therefore achieve its daily inverse investment objective. To achieve a high degree of 2 times inverse correlation with the Underlying Security, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its daily inverse investment objective. The possibility of the Fund being materially over-exposed (meaning providing more than -200% exposure to the Underlying Security – *i.e.*, -201% or greater) or under-exposed (meaning providing less than -200% exposure to the Underlying Security – *i.e.*, -199% or less) to the Underlying Security increases on days when the Underlying Security is volatile near the close of the trading day. Market disruptions, regulatory restrictions and extreme volatility will also adversely affect the Fund’s ability to adjust exposure to the required levels. If there is a significant intra-day market event and/or the Underlying Security experiences a significant increase or decline, the Fund may not meet its investment objective, be able to rebalance its portfolio appropriately, or may experience significant premiums or discounts, or widened bid-ask spreads.

The Fund may have difficulty achieving its daily 2 times inverse investment objective due to fees, expenses, transaction costs, financing costs related to the use of derivatives, investments in ETFs, directly or indirectly, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or derivatives held by the Fund. The Fund may be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being over- or under-exposed to the Underlying Security. The Fund may take or refrain from taking positions to improve the tax efficiency or to comply with various regulatory restrictions, either of which may negatively impact the Fund’s 2 times inverse correlation to the Underlying Security.

Short Sale Exposure Risk. The Fund will seek inverse or “short” exposure through financial instruments, which would cause the Fund to be exposed to certain risks associated with selling short. These risks include, under certain market conditions, an increase in the volatility and decrease in the liquidity of the instruments underlying the short position, which may lower the Fund’s return, result in a loss, have the effect of limiting the Fund’s ability to obtain inverse exposure through financial instruments, or require the Fund to seek inverse exposure through alternative investment strategies that may be less desirable or more costly to implement. To the extent that, at any particular point in time, the instruments underlying the short position may be thinly traded or have a limited market, including due to regulatory action, the Fund may be unable to meet its investment objective due to a lack of available securities or counterparties. During such periods, the Fund’s ability to issue additional Shares may be adversely affected. Obtaining inverse exposure through these instruments may be considered an aggressive investment technique. Any income, dividends or payments by any assets underlying the Fund’s short positions, if any, would negatively impact the Fund. The Fund could lose an amount greater than its net assets in the event the Underlying Security increases more than 50%.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, leverage, imperfect daily correlations with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested.

The Fund will be subject to regulatory constraints relating to level of value at risk that the Fund may incur through its derivative portfolio. If the Fund exceeds these regulatory thresholds, it may adjust its portfolio. These adjustments may cause the Fund to fail to achieve investment results, before fees and expenses, that correspond to -200% of the daily performance of the Underlying Security and may result in substantially lower returns during these periods. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily inverse performance for the Fund.

In addition, the Fund's investments in derivatives are subject to the following risks:

Swap Agreements. The use of swap transactions is a highly specialized activity, which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. Whether the Fund will be successful in using swap agreements to achieve its investment goal depends on the ability of the Adviser to structure such swap agreements in accordance with the Fund's investment objective and to identify counterparties for those swap agreements. If the Adviser, is unable to enter into swap agreements that provide inverse exposure to the Underlying Security, the Fund may not meet its stated investment objective. Additionally, any financing, borrowing or other costs associated with using swap transactions may also have the effect of lowering the Fund's return.

The swap agreements in which the Fund invests are generally traded in the over-the-counter market, which generally has less transparency than exchange-traded derivatives instruments. In a standard swap transaction, two parties agree to exchange the return (or differentials in rates of return) earned or realized on particular predetermined reference assets or underlying securities or instruments. The gross return to be exchanged or swapped between the parties is calculated based on a notional amount or the return on or change in value of a particular dollar amount invested in a basket of securities.

If the Underlying Security has a dramatic move that causes a material decline in the Fund's net assets, the terms of a swap agreement between the Fund and its counterparty may permit the counterparty to immediately close out the swap transaction with the Fund. In that event, the Fund may be unable to enter into another swap agreement or invest in other derivatives to achieve exposure consistent with the Fund's investment objective. This may prevent the Fund from achieving its inverse investment objective, even if the Underlying Security later reverses all or a portion of its movement.

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. The value of the options contracts in which the Fund invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses. The use of options to generate leverage introduces additional risks, including significant potential losses if the market moves unfavorably. The leverage inherent in options can amplify both gains and losses, leading to increased volatility and potential for substantial losses, particularly in periods of market uncertainty or

low liquidity. Additionally, the Fund may incur losses if the value of the Underlying Security moves against its positions, potentially resulting in a complete loss of the premium paid.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in derivatives which exposes the Fund to the risk that the counterparty will not fulfill its obligation to the Fund. Counterparty risk may arise because of the counterparty's financial condition (*i.e.*, financial difficulties, bankruptcy, or insolvency), market activities and developments, or other reasons, whether foreseen or not. A counterparty's inability to fulfill its obligation may result in significant financial loss to the Fund and the Fund may be unable to recover its investment from such counterparty or may obtain a limited and/or delayed recovery.

Counterparties may seek to hedge their exposure to individual clients (such as the Fund) by establishing offsetting exposures with other clients, however, there is no guarantee that counterparties will do so under all circumstances. Should a counterparty (e.g., a swap counterparty) terminate its relationship with the Fund, the Fund will seek to utilize other counterparties to seek to maintain its exposures. In addition, the Fund may use options contracts to seek to generate the leverage necessary to implement its strategy. The use of options contracts introduces distinct risks, including heightened volatility, particularly intraday. While options may provide an ancillary benefit of mitigating some losses under specific scenarios, such as severe market downturns, their inherent leverage and rapid price fluctuations can amplify the Fund's performance volatility and lead to greater risks of substantial losses. Refer to "Derivatives Risk – Options Contracts" for additional information on the risks of investing in options.

In addition, the Fund may enter into swap agreements with a limited number of counterparties, which may increase the Fund's exposure to counterparty credit risk. Further, there is a risk that no suitable counterparties will be willing to enter into, or continue to enter into, transactions with the Fund and, as a result, the Fund may not be able to achieve its investment objective.

Intra-Day Investment Risk. The Fund seeks investment results from the close of the market on a given trading day until the close of the market on the subsequent trading day. The exact exposure of an investment in the Fund intraday in the secondary market is a function of the difference between the value of the Underlying Security at the market close on the first trading day and the value of the Underlying Security at the time of purchase. If the Underlying Security declines in value, the Fund's net assets will rise by the same amount as the Fund's exposure. Conversely, if the Underlying Security gains in value, the Fund's net assets will decline by the same amount as the Fund's exposure. Thus, an investor that purchases Shares intra-day may experience performance that is greater than, or less than, the Fund's stated inverse performance of the Underlying Security.

If there is a significant intra-day market event and/or the securities of the Underlying Security experience a significant increase or decrease, the Fund may not meet its investment objective or rebalance its portfolio appropriately.

Fixed Income Securities Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's Share price and total return to be reduced and fluctuate more than other types of investments.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to the Underlying Security that is significantly greater or less than its stated investment objective. As a result, the Fund may be exposed to leverage risk because it had not been properly rebalanced and may not achieve its investment objective.

ETF Risks

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed

to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. The costs associated with cash redemptions may include brokerage costs that the Fund may not have incurred if it had made the redemptions in-kind. These costs could be imposed on the Fund, decreasing its NAV, to the extent these costs are not offset by a transaction fee payable by an authorized participant.

Costs of Buying or Selling Shares. Buying or selling Shares involves certain costs, including brokerage commissions, other charges imposed by brokers, and bid-ask spreads. The bid-ask spread represents the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares. The spread varies over time based on the Shares' trading volume and market liquidity. The spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as The Nasdaq Stock Market, LLC (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. This adverse effect on liquidity for the Fund's shares may lead to wider bid-ask spreads and differences between the market price of the Fund's shares and the underlying value of the shares.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Adviser. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. These situations may have an impact on the liquidity of the Funds own shares."

Economic and Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), deflation (or expectations for deflation), interest rates, global demand for particular products or resources, market instability, financial system instability, debt crises and downgrades, embargoes, tariffs, sanctions and other trade barriers, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics. The imposition by the U.S. of tariffs on goods imported from foreign countries and reciprocal tariffs levied on U.S. goods by those countries also may lead to volatility and instability in domestic and foreign markets.

High Portfolio Turnover Risk. Daily rebalancing of the Fund's holdings pursuant to its daily investment objective causes a much greater number of portfolio transactions when compared to most ETFs. Additionally, active market trading of the Fund's Shares on exchanges (such as the Exchange), could cause more frequent creation and redemption activities, which could increase the number of portfolio transactions. Frequent and active trading may lead to higher transaction costs because of increased broker commissions resulting from such transactions. In addition, there is the possibility of significantly increased short-term capital gains (which will be taxable to shareholders as ordinary income when distributed to them). The Fund calculates portfolio turnover without including the short-term cash instruments or derivative transactions that comprise the majority of the Fund's trading. As such, if the Fund's extensive use of derivative instruments were reflected, the calculated portfolio turnover rate would be significantly higher.

Tracking Error Risk. Tracking error is the divergence of the Fund's performance from that of its investment objective which aims to replicate -2X the daily percentage change in the price of the Underlying Security. Tracking error may occur for a number of reasons. Tracking error may occur because of transaction costs, the Fund's holding of cash, differences in accrual of dividends, being under- or overexposed to the Underlying Security or the need to meet new or existing regulatory requirements. Tracking error risk may be

heightened during times of market volatility or other unusual market conditions such as market disruptions. The Fund may be required to deviate from its investment objectives, and therefore experience tracking error, as a result of market restrictions or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Adviser and its affiliates.

Liquidity Risk. Some securities held by the Fund may be difficult to sell or be illiquid, particularly during times of market turmoil. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments may lose money.

New Fund Risk. The Fund is a recently organized management investment company with a limited operating history. As a result, prospective investors have only a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Trading Halt Risk. Although the Underlying Security’s shares are listed for trading on an exchange, there can be no assurance that an active trading market for such shares will be available at all times and the Exchange may halt trading of such shares in certain circumstances. A halt in trading in the Underlying Security’s shares is expected, in turn, to result in a halt in the trading in the Fund’s Shares. Trading in the Underlying Security’s and/or Fund’s Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in the Underlying Security’s and/or Fund’s Shares inadvisable. In addition, trading in Underlying Security’s and/or Fund’s Shares on an exchange is subject to trading halts caused by extraordinary market volatility pursuant to exchange “circuit breaker” rules.” In the event of a trading halt for an extended period of time, the Fund may be unable to execute arrangements with swap counterparties that are necessary to implement the Fund’s investment strategy.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and the Fund’s investment advisor seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of swap contracts and options on shares of a single issuer does not exceed 25% of the Fund’s value at the close of any quarter. If the value of swap contracts and options on shares of a single issuer were to exceed 25% of the Fund’s total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.defianceetfs.com.

Management

Investment Adviser: Tidal Investments LLC, a Tidal Financial Group company, serves as investment adviser to the Fund.

Portfolio Manager:

The following individual is primarily responsible for the day-to-day management of the Fund.

Stephen Foy, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.defianceetfs.com.

Tax Information

Fund distributions are generally taxable to shareholders as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

DEFIANCE DAILY TARGET 2X SHORT QBTS ETF - FUND SUMMARY

Important Information About the Fund

The Defiance Daily Target 2X Short QBTS ETF (the “Fund”) seeks daily inverse investment results of -2 times (-200%) the daily percentage change of the common stock of D-Wave Quantum Inc. (NYSE: QBTS) (the “Underlying Security”). Because the Fund seeks daily 200% *inverse* investment results, it is very different from most other exchange-traded funds. It is also riskier than alternatives that do not use a short strategy. The return for investors that invest for periods longer or shorter than a trading day should not be expected to be -200% the performance of the Underlying Security for the period. The return of the Fund for a period longer than a trading day will be the result of each trading day’s compounded return over the period, which will very likely differ from -200% the return of the Underlying Security for that period. Longer holding periods, higher volatility of the Underlying Security and leverage increase the impact of compounding on an investor’s returns. During periods of higher underlying security volatility, the volatility of the Underlying Security may affect the Fund’s return as much as, or more than, the return of the Underlying Security.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking 200% daily inverse (-2X) investment results, understand the risks associated with the use of leverage, and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single day, the Fund will lose money if the Underlying Security’s performance is flat, and it is possible that the Fund will lose money even if the Underlying Security’s performance decreases over a period longer than a single day. An investor could lose the full principal value of his/her investment within a single day.

Investment Objective

The Fund seeks daily inverse investment results, before fees and expenses, of -2 times (-200%) the daily percentage change in the share price of D-Wave Quantum Inc. (NYSE: QBTS) The Fund does not seek to achieve its stated investment objective for a period other than a single trading day.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.29%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ⁽²⁾	<u>0.00%</u>
Total Annual Fund Operating Expenses⁽³⁾	<u><u>1.29%</u></u>

⁽¹⁾ The Fund’s adviser will pay, or require a sub-adviser to pay, all of the Fund’s expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the “1940 Act”), litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

⁽³⁾ The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$131	\$409

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the Example, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange traded fund that attempts to achieve 2 times the inverse (-200%) of the daily percentage change in the price of the Underlying Security by employing derivatives, namely swap agreements and/or listed options contracts. The Fund aims to generate 2 times the inverse of the daily performance of the Underlying Security for a single day, and not for any other period. A "single day" is defined as being calculated "from the close of regular trading on one trading day to the close on the next trading day." The Fund is classified as "non-diversified" under the 1940 Act.

If the Fund encounters limitations in implementing its strategies, whether due to market conditions, derivative availability, counterparty issues, or other factors, **the Fund may not achieve investment results, before fees and expenses, that correspond to 2 times the inverse (-2x) the daily performance of the Underlying Security, and may return substantially less during such periods. During such periods, the Fund's actual leverage levels may differ substantially from its intended target, both intraday and at the close of trading, potentially resulting in significantly lower returns.**

The Fund may enter into swap agreements as a substitute for directly shorting the Underlying Security. The Fund will enter into one or more swap agreements with major financial institutions for a specified period ranging from one day to more than one year whereby the Fund and the financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on the Underlying Security. The gross return (meaning the return before deducting any fees or expenses) to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," (meaning the face amount of the instrument) e.g., the return on or change in value of a particular dollar amount representing the Underlying Security. At the end of each day, the Fund's swaps are valued using market valuations and the Fund's investment adviser rebalances the Fund's holdings in an attempt to maintain short exposure for the Fund equal to -200% of the Underlying Security. This daily rebalancing is expected to result in high portfolio turnover.

The Fund may also utilize listed options to seek to achieve leveraged -2X exposure to the Underlying Security. The Fund will primarily employ short-dated (a month or less) in-the-money call options (options with strike prices below the current market price of the Underlying Security, offering immediate intrinsic value). Additionally, the Fund may use other option strategies to produce similar exposure to the Underlying Security, like buying calls and selling puts with identical strike prices. These options allow the Fund to adjust its leverage strategy in response to market conditions, liquidity constraints, or other factors that may affect the availability or pricing of swap agreements. The use of listed options provides additional flexibility in pursuing the Fund's daily investment objective. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics. However, the use of option contracts is typically less efficient than swaps and may increase the likelihood that the Fund is unable to achieve its daily -2X objective.

For examples of a hypothetical investment in the Fund, see "*Additional Information About the Fund – Principal Investment Strategies*" below.

Fund performance for periods greater than one single day is primarily (but not solely) a function of the following factors: a) the Underlying Security volatility; b) the Underlying Security performance; c) period of time; d) financing rates associated with inverse exposure; and e) other Fund expenses.

The Fund may invest in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short term bond ETFs; and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured

promissory notes issued by businesses that are rated investment grade or of comparable quality as determined by the investment adviser as collateral for the Fund's derivative positions.

The Fund has adopted a policy to have at least 80% of its net assets, plus borrowings for investment purposes, in financial instruments with economic characteristics that should provide 2 times the inverse exposure to the daily performance of the Underlying Security. For purposes of the 80% policy, derivatives will be valued at notional value.

Due to the Fund's investment strategy, the Fund's investment exposure is concentrated in the industry assigned to the Underlying Security. As of the date of the Prospectus, QBTS is assigned to the semiconductor & software industry.

The Fund is expected to allocate between 40% and 75% of its assets as collateral for swap agreements or as premiums for purchased options contracts.

Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single day will be the result of each day's returns compounded over the period, which will very likely differ from -200% of the return of the Underlying Security over the same period. The Fund will lose money if the Underlying Security's performance is flat over time, and as a result of daily rebalancing, the Underlying Security volatility and the effects of compounding, the Fund may lose money over time while the Underlying Security's performance decreases over a period longer than a single day. As a consequence, investors should not plan to hold shares of a Fund unmonitored for periods longer than a single trading day.

QBTS

This prospectus relates only to the Fund Shares offered hereby and is not a prospectus for the shares of D-Wave Quantum Inc. (NYSE: QBTS).

D-Wave Quantum Inc. develops and delivers quantum computing systems, software, and services worldwide. QBTS is listed on the New York Stock Exchange ("NYSE"). Per QBTS's most recent Form 10-K filing, the aggregate market value of common stock of QBTS held by non-affiliates as of June 30, 2024 was approximately \$136.7 million.

QBTS is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by QBTS pursuant to the Exchange Act can be located by reference to the SEC file number 001-41468 through the SEC's website at www.sec.gov. In addition, information regarding QBTS may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of QBTS or other securities of D-Wave Quantum Inc. The Fund has derived all disclosures contained in this document regarding QBTS from the publicly available documents. None of the Fund, the Trust, or the Adviser, or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to QBTS. None of the Fund, the Trust, or the Adviser, or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding QBTS is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of QBTS (and therefore the share price of the Fund at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning QBTS could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser, or their respective affiliates makes any representation to you as to the performance of QBTS.

NONE OF THE FUND, TIDAL TRUST II, AND TIDAL INVESTMENTS LLC ARE AFFILIATED WITH THE UNDERLYING SECURITY.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its investment objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Fund — Principal Risks of Investing in the Fund."

QBTS Price Appreciation Risk. As part of the Fund’s inverse investment strategy, the Fund purchases and sells swap contracts and options contracts that are based on the share price of QBTS common stock (the “Underlying Security”). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund’s indirect -2X exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security’s share price increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses. The Fund may also be subject to the following risks:

- *Indirect Investment in QBTS Risk.* D-Wave Quantum Inc. is not affiliated with the Trust, the Fund, the Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of D-Wave Quantum Inc., but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.
- *QBTS Good Performance Risk.* QBTS may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. QBTS regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. QBTS’s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If QBTS’s guidance is accurate or varies positively from actual results, QBTS’s share price could increase significantly and, as a result, the Fund may suffer significant losses.
- *Industry Recognition and Analyst Coverage Risk.* Positive recognition from industry analysts, awards for product excellence, or inclusion in prestigious industry reports can enhance QBTS’s reputation and credibility among investors. Favorable analyst ratings, upgrades, or bullish forecasts for the company’s future performance can drive investor enthusiasm and contribute to a rise in QBTS’s stock price.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security, may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole. Additionally, the Fund will seek to employ its investment strategy as it relates to the underlying issuer regardless of whether the company has strong earnings reports, or provides positive future guidance, dividend increases, share buybacks, or engages in strategic acquisitions and product launches. Additionally, the Fund will seek to employ its investment strategy as it relates to the underlying issuer regardless of whether there are favorable industry trends, regulatory approvals, analyst upgrades, strategic partnerships, debt reduction, or improved economic conditions.

Compounding and Market Volatility Risk. The Fund’s performance for periods greater than a trading day will be the result of each day’s returns compounded over the period, which is likely to differ from -200% of the Underlying Security’s performance, before fees and expenses. Compounding has a significant impact on funds that are inverse leveraged and that rebalance daily. The impact of compounding becomes more pronounced as volatility and holding periods increase and will impact each shareholder differently depending on the period of time an investment in the Fund is held and the volatility of the Underlying Security during the shareholder’s holding period of an investment in the Fund.

The chart below provides examples of how Underlying Security volatility could affect the Fund’s performance. Fund performance for periods greater than one single day can be estimated given any set of assumptions for the following factors: a) Underlying Security volatility; b) Underlying Security’s performance; c) period of time; d) financing rates associated with leveraged exposure; e) other Fund expenses; and f) the Underlying Security’s dividends. The chart below illustrates the impact of two principal factors – Underlying Security volatility and performance – on Fund performance. The chart shows estimated Fund returns for a number of combinations of Underlying Security volatility and performance over a one-year period. Performance shown in the chart assumes that (i) there were no Fund expenses; and (ii) borrowing rates (needed to obtain a leveraged short exposure) of 0%. If Fund expenses and/or actual borrowing/lending rates were reflected, the estimated returns would be lower than those shown. Particularly during periods where the Underlying Security experiences higher volatility, compounding will cause results for periods longer than a trading day to vary from -200% of the performance of the Underlying Security.

As shown in the chart below, the Fund would be expected to lose 17.10% if the Underlying Security provided no return over a one-year period during which the Underlying Security experienced annualized volatility of 25%. At higher ranges of volatility, there is a chance of a significant loss of value in the Fund, even if the Underlying Security return is flat.

For instance, if the Underlying Security’s annualized volatility is 100%, the Inverse Fund would be expected to lose 95% of its value, even if the cumulative Underlying Security’s return for the year was 0%. Areas shaded red (or dark gray) represent those scenarios where the Inverse Fund can be expected to return less than -200% of the performance of the Underlying Security and those shaded green (or light gray) represent those scenarios where the Fund can be expected to return more than -200% of the performance of the Underlying Security. The Inverse Fund’s actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in “Tracking Error Risk” below.

One year performance of the stock Return	-200% of one year performance of the stock Return	Volatility Rate (Annualized)				
		10%	25%	50%	75%	100%
-60%	120%	506.50%	418.10%	195.20%	-6.80%	-68.90%

30%	-60%	-42.60%	-50.90%	-72.00%	-89.10%	-97.10%
40%	-80%	-50.50%	-57.70%	-75.90%	-90.60%	-97.50%
50%	-100%	-56.90%	-63.20%	-79.00%	-91.80%	-97.80%
60%	-120%	-62.10%	-67.60%	-81.50%	-92.80%	-98.10%

The Underlying Security’s annualized historical volatility rate for the period from December 11, 2020 to May 21, 2025 (the longest period available) was 123.08%. The Underlying Security’s highest volatility rate for any one calendar year during this period was 159.83% and volatility for a shorter period of time may have been substantially higher. The Underlying Security’s annualized performance during this period was 19.22%. Historical Underlying Security volatility and performance are not indications of what Underlying Security volatility and performance will be in the future.

Daily Correlation/Tracking Risk. There is no guarantee that the Fund will achieve a high degree of inverse correlation to the Underlying Security and therefore achieve its daily inverse investment objective. To achieve a high degree of 2 times inverse correlation with the Underlying Security, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its daily inverse investment objective. The possibility of the Fund being materially over-exposed (meaning providing more than -200% exposure to the Underlying Security – *i.e.*, -201% or greater) or under-exposed (meaning providing less than -200% exposure to the Underlying Security – *i.e.*, -199% or less) to the Underlying Security increases on days when the Underlying Security is volatile near the close of the trading day. Market disruptions, regulatory restrictions and extreme volatility will also adversely affect the Fund’s ability to adjust exposure to the required levels. If there is a significant intra-day market event and/or the Underlying Security experiences a significant increase or decline, the Fund may not meet its investment objective, be able to rebalance its portfolio appropriately, or may experience significant premiums or discounts, or widened bid-ask spreads.

The Fund may have difficulty achieving its daily 2 times inverse investment objective due to fees, expenses, transaction costs, financing costs related to the use of derivatives, investments in ETFs, directly or indirectly, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or derivatives held by the Fund. The Fund may be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being over- or under-exposed to the Underlying Security. The Fund may take or refrain from taking positions to improve the tax efficiency or to comply with various regulatory restrictions, either of which may negatively impact the Fund’s 2 times inverse correlation to the Underlying Security.

Short Sale Exposure Risk. The Fund will seek inverse or “short” exposure through financial instruments, which would cause the Fund to be exposed to certain risks associated with selling short. These risks include, under certain market conditions, an increase in the volatility and decrease in the liquidity of the instruments underlying the short position, which may lower the Fund’s return, result in a loss, have the effect of limiting the Fund’s ability to obtain inverse exposure through financial instruments, or require the Fund to seek inverse exposure through alternative investment strategies that may be less desirable or more costly to implement. To the extent that, at any particular point in time, the instruments underlying the short position may be thinly traded or have a limited market, including due

to regulatory action, the Fund may be unable to meet its investment objective due to a lack of available securities or counterparties. During such periods, the Fund's ability to issue additional Shares may be adversely affected. Obtaining inverse exposure through these instruments may be considered an aggressive investment technique. Any income, dividends or payments by any assets underlying the Fund's short positions, if any, would negatively impact the Fund. The Fund could lose an amount greater than its net assets in the event the Underlying Security increases more than 50%.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, leverage, imperfect daily correlations with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested.

The Fund will be subject to regulatory constraints relating to level of value at risk that the Fund may incur through its derivative portfolio. If the Fund exceeds these regulatory thresholds, it may adjust its portfolio. These adjustments may cause the Fund to fail to achieve investment results, before fees and expenses, that correspond to -200% of the daily performance of the Underlying Security and may result in substantially lower returns during these periods. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily inverse performance for the Fund.

In addition, the Fund's investments in derivatives are subject to the following risks:

Swap Agreements. The use of swap transactions is a highly specialized activity, which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. Whether the Fund will be successful in using swap agreements to achieve its investment goal depends on the ability of the Adviser to structure such swap agreements in accordance with the Fund's investment objective and to identify counterparties for those swap agreements. If the Adviser, is unable to enter into swap agreements that provide inverse exposure to the Underlying Security, the Fund may not meet its stated investment objective. Additionally, any financing, borrowing or other costs associated with using swap transactions may also have the effect of lowering the Fund's return.

The swap agreements in which the Fund invests are generally traded in the over-the-counter market, which generally has less transparency than exchange-traded derivatives instruments. In a standard swap transaction, two parties agree to exchange the return (or differentials in rates of return) earned or realized on particular predetermined reference assets or underlying securities or instruments. The gross return to be exchanged or swapped between the parties is calculated based on a notional amount or the return on or change in value of a particular dollar amount invested in a basket of securities.

If the Underlying Security has a dramatic move that causes a material decline in the Fund's net assets, the terms of a swap agreement between the Fund and its counterparty may permit the counterparty to immediately close out the swap transaction with the Fund. In that event, the Fund may be unable to enter into another swap agreement or invest in other derivatives to achieve exposure consistent with the Fund's investment objective. This may prevent the Fund from achieving its inverse investment objective, even if the Underlying Security later reverses all or a portion of its movement.

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. The value of the options contracts in which the Fund invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying

Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses. The use of options to generate leverage introduces additional risks, including significant potential losses if the market moves unfavorably. The leverage inherent in options can amplify both gains and losses, leading to increased volatility and potential for substantial losses, particularly in periods of market uncertainty or low liquidity. Additionally, the Fund may incur losses if the value of the Underlying Security moves against its positions, potentially resulting in a complete loss of the premium paid.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in derivatives which exposes the Fund to the risk that the counterparty will not fulfill its obligation to the Fund. Counterparty risk may arise because of the counterparty’s financial condition (*i.e.*, financial difficulties, bankruptcy, or insolvency), market activities and developments, or other reasons, whether foreseen or not. A counterparty’s inability to fulfill its obligation may result in significant financial loss to the Fund and the Fund may be unable to recover its investment from such counterparty or may obtain a limited and/or delayed recovery.

Counterparties may seek to hedge their exposure to individual clients (such as the Fund) by establishing offsetting exposures with other clients, however, there is no guarantee that counterparties will do so under all circumstances. Should a counterparty (e.g., a swap counterparty) terminate its relationship with the Fund, the Fund will seek to utilize other counterparties to seek to maintain its exposures. In addition, the Fund may use options contracts to seek to generate the leverage necessary to implement its strategy. The use of options contracts introduces distinct risks, including heightened volatility, particularly intraday. While options may provide an ancillary benefit of mitigating some losses under specific scenarios, such as severe market downturns, their inherent leverage and rapid price fluctuations can amplify the Fund’s performance volatility and lead to greater risks of substantial losses. Refer to “Derivatives Risk – Options Contracts” for additional information on the risks of investing in options.

In addition, the Fund may enter into swap agreements with a limited number of counterparties, which may increase the Fund’s exposure to counterparty credit risk. Further, there is a risk that no suitable counterparties will be willing to enter into, or continue to enter into, transactions with the Fund and, as a result, the Fund may not be able to achieve its investment objective.

Intra-Day Investment Risk. The Fund seeks investment results from the close of the market on a given trading day until the close of the market on the subsequent trading day. The exact exposure of an investment in the Fund intraday in the secondary market is a function of the difference between the value of the Underlying Security at the market close on the first trading day and the value of the Underlying Security at the time of purchase. If the Underlying Security declines in value, the Fund’s net assets will rise by the same amount as the Fund’s exposure. Conversely, if the Underlying Security gains in value, the Fund’s net assets will decline by the same amount as the Fund’s exposure. Thus, an investor that purchases Shares intra-day may experience performance that is greater than, or less than, the Fund’s stated inverse performance of the Underlying Security.

If there is a significant intra-day market event and/or the securities of the Underlying Security experience a significant increase or decrease, the Fund may not meet its investment objective or rebalance its portfolio appropriately.

Fixed Income Securities Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund’s Share price and total return to be reduced and fluctuate more than other types of investments.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund’s investment exposure may not be consistent with the Fund’s investment objective. In these instances, the Fund may have investment exposure to the Underlying Security that is significantly greater or less than its stated investment objective. As a result, the Fund may be exposed to leverage risk because it had not been properly rebalanced and may not achieve its investment objective.

ETF Risks

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these

services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. The costs associated with cash redemptions may include brokerage costs that the Fund may not have incurred if it had made the redemptions in-kind. These costs could be imposed on the Fund, decreasing its NAV, to the extent these costs are not offset by a transaction fee payable by an authorized participant.

Costs of Buying or Selling Shares. Buying or selling Shares involves certain costs, including brokerage commissions, other charges imposed by brokers, and bid-ask spreads. The bid-ask spread represents the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares. The spread varies over time based on the Shares' trading volume and market liquidity. The spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as The Nasdaq Stock Market, LLC (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. This adverse effect on liquidity for the Fund's shares may lead to wider bid-ask spreads and differences between the market price of the Fund's shares and the underlying value of the shares.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Adviser. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. These situations may have an impact on the liquidity of the Funds own shares."

Economic and Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), deflation (or expectations for deflation), interest rates, global demand for particular products or resources, market instability, financial system instability, debt crises and downgrades, embargoes, tariffs, sanctions and other trade barriers, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics. The imposition by the U.S. of tariffs on goods imported from foreign countries and reciprocal tariffs levied on U.S. goods by those countries also may lead to volatility and instability in domestic and foreign markets.

High Portfolio Turnover Risk. Daily rebalancing of the Fund's holdings pursuant to its daily investment objective causes a much greater number of portfolio transactions when compared to most ETFs. Additionally, active market trading of the Fund's Shares on exchanges (such as the Exchange), could cause more frequent creation and redemption activities, which could increase the number of portfolio transactions. Frequent and active trading may lead to higher transaction costs because of increased broker commissions resulting from such transactions. In addition, there is the possibility of significantly increased short-term capital gains (which will be taxable to shareholders as ordinary income when distributed to them). The Fund calculates portfolio turnover without including the

short-term cash instruments or derivative transactions that comprise the majority of the Fund's trading. As such, if the Fund's extensive use of derivative instruments were reflected, the calculated portfolio turnover rate would be significantly higher.

Tracking Error Risk. Tracking error is the divergence of the Fund's performance from that of its investment objective which aims to replicate -2X the daily percentage change in the price of the Underlying Security. Tracking error may occur for a number of reasons. Tracking error may occur because of transaction costs, the Fund's holding of cash, differences in accrual of dividends, being under- or overexposed to the Underlying Security or the need to meet new or existing regulatory requirements. Tracking error risk may be heightened during times of market volatility or other unusual market conditions such as market disruptions. The Fund may be required to deviate from its investment objectives, and therefore experience tracking error, as a result of market restrictions or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Adviser and its affiliates.

Liquidity Risk. Some securities held by the Fund may be difficult to sell or be illiquid, particularly during times of market turmoil. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments may lose money.

New Fund Risk. The Fund is a recently organized management investment company with a limited operating history. As a result, prospective investors have only a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Trading Halt Risk. Although the Underlying Security's shares are listed for trading on an exchange, there can be no assurance that an active trading market for such shares will be available at all times and the Exchange may halt trading of such shares in certain circumstances. A halt in trading in the Underlying Security's shares is expected, in turn, to result in a halt in the trading in the Fund's Shares. Trading in the Underlying Security's and/or Fund's Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in the Underlying Security's and/or Fund's Shares inadvisable. In addition, trading in Underlying Security's and/or Fund's Shares on an exchange is subject to trading halts caused by extraordinary market volatility pursuant to exchange "circuit breaker" rules." In the event of a trading halt for an extended period of time, the Fund may be unable to execute arrangements with swap counterparties that are necessary to implement the Fund's investment strategy.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and the Fund's investment advisor seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to

Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of swap contracts and options on shares of a single issuer does not exceed 25% of the Fund's value at the close of any quarter. If the value of swap contracts and options on shares of a single issuer were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.defianceetfs.com.

Management

Investment Adviser: Tidal Investments LLC, a Tidal Financial Group company, serves as investment adviser to the Fund.

Portfolio Manager:

The following individual is primarily responsible for the day-to-day management of the Fund.

Stephen Foy, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.defianceetfs.com.

Tax Information

Fund distributions are generally taxable to shareholders as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objective

Each Fund seeks daily inverse investment results of -2 times (-200%) the daily percentage change of the common stock of its Underlying Security. Each Fund seeks -2X investment results on a daily basis – from the close of regular trading on one trading day to the close on the next trading day – which should not be equated with seeking a -2X investment objective for any other period.

Each Fund seeks to provide a return of -2X daily performance of its Underlying Security. Each Fund does not attempt to, and should not be expected to, provide -2X returns of its Underlying Security for periods other than a single day. Each Fund rebalances its implied exposure on a daily basis, increasing inverse exposure in the Underlying Security in response to that day's gains or reducing inverse exposure in the Underlying Security in response to that day's losses.

The exposure to the Underlying Security received by an investor who purchases the Fund intra-day will differ from the Fund's stated daily investment objective by an amount determined by the movement of its Underlying Security from its value at the end of the prior day. If the Underlying Security moves in a direction favorable to the Fund (i.e., the Underlying Security decreases in value) between the close of the market on one trading day through the time on the next trading day when the investor purchases Fund Shares, the investor will receive less exposure to the Underlying Security than the Fund's stated daily investment objective (i.e., -199% or less exposure to the Underlying Security). Conversely, if the Underlying Security moves in a direction adverse to the Fund (i.e., the Underlying Security increases in value), the investor will receive more exposure to the Underlying Security than the Fund's stated daily investment objective (i.e., -201% or greater exposure to the Underlying Security).

As used in this Prospectus, the terms "daily," "day," and "trading day," refer to the period from the regular close of the markets on one trading day to the regular close of the markets on the next trading day.

Each Fund is designed as a short-term trading vehicle. The Funds are intended to be used by investors who intend to actively monitor and manage their portfolios.

Shares of each Fund upon commencement of operations will be listed and traded on the Exchange, where the market prices for the Shares may be different from the intra-day value of the Shares disseminated by the Exchange and from their NAV. Unlike conventional mutual funds, Shares are not individually redeemable directly with the Fund. Rather, each Fund issues and redeems Shares on a continuous basis at NAV only in large blocks of Shares called "Creation Units." Creation Units of the Funds are issued and redeemed for cash. As a result, retail investors generally will not be able to purchase or redeem Shares directly from, or with, a Fund. Most retail investors will purchase or sell Shares in the secondary market through a broker.

The Funds are not suitable for all investors. In particular, the Funds are not suitable for investors with longer-term investment objectives. Each Fund is designed to be utilized only by sophisticated investors, such as traders and active investors employing dynamic strategies. Such investors are expected to monitor and manage their portfolios frequently. Investors in the Funds should: (a) understand the consequences of seeking daily -2X investment results and (b) understand the risk of short selling. Investors who do not understand the Fund or do not intend to actively manage their funds and monitor their investments should not buy any Fund shares.

There is no assurance that any Fund will achieve its investment objective and an investment in any Fund could lose a substantial amount of money over a short period of time. No single fund is a complete investment program.

An investment objective is fundamental if it cannot be changed without the consent of the holders of a majority of the outstanding Shares. A Fund's investment objective has not been adopted as a fundamental investment policy and therefore a Fund's investment objective may be changed without the consent of that Fund's shareholders upon approval by the Board of Trustees (the "Board") of Tidal Trust II (the "Trust") and at least 60 days' written notice to shareholders.

Principal Investment Strategies

Each Fund has adopted a policy to have at least 80% of its net assets, plus borrowings for investment purposes, in financial instruments with economic characteristics that should provide 2 times the inverse exposure to the daily performance of the Underlying Security. Each Fund's 80% policy is non-fundamental and can be changed without shareholder approval. However, Fund shareholders would be given at least 60 days' notice prior to any such change. To the extent derivatives are used to meet the Fund's 80% policy, the notional value of the derivatives will be used when determining such Fund's compliance.

In seeking to achieve each Fund's investment objective, the Adviser invests in a manner that is designed to correspond to the -2X of the daily performance of such Fund's Underlying Security. Each Fund attempts to achieve its investment objective by investing a substantial

amount of its assets in financial instruments that provide exposure to its Underlying Security, such as swap agreements. At the end of each trading day, it is expected that for the -2X exposure the Fund seeks, the swap notional exposure against the Underlying Security will be approximately equal to -2 times each Fund's NAV.

To achieve a swap notional exposure equal to -2 times Fund's NAV at the end of each trading day, the Adviser will adjust the swap notional exposure daily by sending orders to the swap provider(s) for execution at close. Such transactions will result in trading fees to be paid by the Fund.

Each Fund will enter into swap agreements with major financial institutions for a specified period ranging from one day to more than one year whereby respective Fund and the global financial institution will agree to exchange the return earned or realized on the underlying security. The gross returns to be exchanged or "swapped" between the parties are calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing the underlying security. Each trading day, the Adviser adjusts each Fund's exposure to its underlying security consistent with the Fund's daily -2X investment objective. The impact of market movements during the day determines whether the portfolio needs to be repositioned. If the value of the underlying security has risen on a given day, the value of the Fund's net assets should decrease, meaning its exposure will typically need to be decreased. Conversely, if the value of the underlying security has fallen on a given day, the value of the Fund's net assets should increase, meaning its exposure will typically need to be increased.

Each Fund engages in transactions with counterparties, which may include subsidiaries of public companies. Investors should be aware that a Fund may not have recourse to the parent company for obligations of such counterparties. Consequently, a Fund is exposed to the credit risk of these counterparties, and their inability to meet the terms of their agreements could result in financial loss to the Fund.

The time and manner in which a Fund rebalances its portfolio may vary from day to day at the sole discretion of the Adviser depending upon market conditions and other circumstances. Generally, at or near the close of the market at each trading day, each Fund will position its portfolio to seek to ensure that the Fund's exposure to its underlying security is consistent with its stated investment objective. Each Fund reviews its notional exposure under each of its swap agreement, which reflects the extent of the Fund's total investment exposure under the swap, to seek to ensure that the Fund's exposure is in-line with its stated investment objective. The gross returns to be exchanged are calculated with respect to the notional amount and the underlying security returns to which the swap is linked. Swaps are typically closed out on a net basis. Thus, while the notional amount reflects a Fund's total investment exposure under the swap, the net amount is the Fund's current obligations (or rights) under the swap. That is the amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement. If for any reason a Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. As a result, a Fund may be more or less exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective. To the extent that a Fund needs to "roll" its swap positions (i.e., enter into new swap positions with a later expiration date as the current positions approach expiration), it could be subjected to increased costs, which could negatively impact the Fund's performance.

The Funds are actively managed and each Fund seeks daily investment results, before fees and expenses, of 2 times the inverse (-200%) of the daily percentage change in the price of the Underlying Security.

Each Fund may invest in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality as determined by the investment adviser as collateral for the Fund's swap agreements.

The Effects of Fees and Expenses on the Return of the Fund for a Single Trading Day

To create the necessary exposure, the Funds will enter into one or more swap agreements with major financial institutions. The Funds will incur borrowing costs associated with the use of swaps. For instance, if an Underlying Security returns 1% on a given day, the gross expected return of the applicable Fund would be negative 2%, but the net expected return, which factors in the cost of financing the portfolio and the impact of operating expenses, would be lower.

The Funds may have difficulty in achieving its daily -2X investment objective due to fees, expenses, transaction costs, income items, accounting standards, significant purchase and redemption activity by respective Fund shareholders and/or disruptions or a temporary lack of liquidity in the markets for the securities held by such Fund.

A Fund will be subject to regulatory constraints relating to level of value at risk that a Fund may incur through its derivative portfolio.

An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in a Fund being unable to buy or sell certain securities or financial instruments. In such

circumstances, such Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

If a Fund is unable to obtain sufficient exposure to its Underlying Security due to the limited availability of necessary investments or financial instruments, such Fund could, among other things, fail to meet its daily -2X investment objective or experience increased transaction fees. Under such circumstances, the Fund could trade at significant bid-ask spreads, premiums or discounts to its NAV and could experience substantial redemptions.

A Cautionary Note to Investors Regarding Dramatic Underlying Security Movement. The Adviser will not attempt to position each Fund’s portfolio to ensure that a Fund does not gain or lose more than maximum percentage of its NAV on a given day. A Fund could lose an amount greater than its net assets in the event of a movement of an Underlying Security in excess of 50% in a direction adverse to the Fund (meaning a gain in the value of the Underlying Security). **As a result, the risk of total loss exists.**

If the Underlying Security has a dramatic gain that causes a material decline in a Fund’s net assets, the terms of a Fund’s swap agreements may permit the counterparty to immediately close out the swap transaction. In that event, the Fund may be unable to enter into another swap agreement or invest in other derivatives to achieve exposure consistent with a Fund’s investment objective. This may prevent a Fund from achieving its investment objective, even if the Underlying Security later reverses all or a portion the move, and result in significant losses.

Examples of the Impact of Daily Compounding. Because each Fund’s exposure to the Underlying Security is repositioned on a daily basis, for a holding period longer than one day, the pursuit of the daily investment objective will result in daily compounding. This means that the return of the Underlying Security over a period of time greater than one day multiplied by the Fund’s daily investment objective (e.g., -200% of such return) generally will not equal such Fund’s performance over that same period. As a consequence, investors should not plan to hold shares of a Fund unmonitored for periods longer than a single trading day. This deviation increases with higher volatility in the Underlying Security and longer holding periods. Further, the return for investors that invest for periods less than a full trading day or for a period different than a trading day will not be the product of the return of such Fund’s stated daily -2X investment objective and the performance of the Underlying Security for the full trading day. The actual exposure will largely be a function of the performance of the Underlying Security from the end of the prior trading day. The following examples assume a full daily two times inverse amount of exactly -2X to the Underlying Security.

Consider the following examples (each of which assumes the investor purchases and sells shares at NAV):

Example A

Amy is considering investments in either the underlying security or Fund A. Fund A is an ETF that seeks daily two times inverse investment results (before fees and expenses) that correspond to -200% of the daily performance of the underlying security (the “Hypothetical Inverse Fund”).

On Day 1, the underlying security’s price increases in value from \$100 to \$108, a gain of 8%. On Day 2, the underlying security’s price declines from \$108 back to \$100, a loss of 7.41%. In the aggregate, the value of the underlying security has not moved. The same \$100 investment in Fund A (the Hypothetical Inverse Fund) would be expected to decline 16% on Day 1 (-200% of 8%) but gain 14.82% on Day 2.

Day	Underlying Security Performance	Hypothetical Inverse Fund (No Daily Investment Hedge) Performance	Value of Hypothetical Inverse Fund (No Daily Investment Hedge) Investment
			\$100.00
1	8.00%	-16%	\$84.00
2	-7.41%	+14.82%	\$96.45

In the case of Fund A, because the -2X of the percentage decrease is applied to a lower principal amount on Day 2, Fund A has a loss. (These calculations do not include the charges for fund fees and expenses.)

As you can see, an investment in Fund A has additional risks due to the effects of compounding.

An investor who purchases shares of a Fund intra-day will generally receive more, or less, than -200% exposure to the underlying security from that point until the end of the trading day. The actual exposure will be largely a function of the performance of the underlying security from the end of the prior trading day. If a Fund’s shares are held for a period longer than a single trading day, the

Fund's performance is likely to deviate from -200% of the return of the underlying security performance for the longer period. This deviation will increase with higher underlying security volatility and longer holding periods.

Examples of the Impact of Volatility of an Underlying Security. Each Fund rebalances its portfolio on a daily basis, increasing exposure in response to that day's gains or reducing exposure in response to that day's losses. Daily rebalancing will typically cause a Fund to lose money if the Underlying Security experiences volatility. Volatility rate is a statistical measure of the magnitude of fluctuations in returns over a defined period. For periods longer than a trading day, volatility in the performance of the Underlying Security from day to day is the primary cause of any disparity between a Fund's actual returns and the returns of the Underlying Security for such period. Volatility causes such disparity because it exacerbates the effects of compounding on a Fund's returns. Consider the following examples that demonstrate the effect of volatility on a hypothetical fund (each of which assumes the investor purchases and sells shares at NAV):

Example 1 – Underlying Security Experiences Low Volatility

John invests \$10.00 in a hypothetical Inverse Fund at the close of trading on Day 1. During Day 2, the hypothetical underlying security rises from \$100 to \$106, and John's investment falls by 6% to \$9.40. On Day 3, the hypothetical underlying security rises from \$106 to \$110, a gain of 3.77% and the hypothetical Inverse Fund falls by 3.77% to \$9.05. For the two-day period the hypothetical underlying security returned 10% while the hypothetical Inverse Fund lost 9.6%. Because the underlying security continued to trend upwards with low volatility, John's return closely correlates to the -200% return of the return of the underlying security for the period.

Example 2 – Underlying Security Experiences High Volatility

Now John invests \$10.00 in a hypothetical Inverse Fund after the close of trading on Day 1. During Day 2, the hypothetical underlying security rises from 100 to 106, a 6% gain, and John's investment declines by 12% to \$8.80. John continues to hold his investment through the end of Day 3, during which the hypothetical underlying security declines from 106 to 98, a loss of 7.55%. John's investment rises by 15.10%, from \$8.80 to \$10.13. For the two-day period since John invested in the hypothetical Inverse Fund, the hypothetical underlying security lost 2% while John's investment increased from \$10 to \$10.13, a 1.29% gain. The volatility of the hypothetical underlying security affected the correlation between the hypothetical underlying security's return for the two-day period and John's return. In this situation, John gained less than the -2X return of the hypothetical underlying security.

Example 3 – Intra-day Investment with Volatility

Examples 1 and 2 assumed that John purchased the Hypothetical Inverse Fund at the close of trading on Day 1 and sold his investment at the close of trading on a subsequent day. However, if he made an investment intra-day, he would have received notional exposure to the underlying security determined by the performance of the underlying security from the end of the prior trading day until her time of purchase on the next trading day.

Consider the following example.

John invests \$10.00 in a hypothetical Inverse Fund at 11 a.m. on Day 2. From the close of trading on Day 1 until 11 a.m. on Day 2, the underlying security moved from \$100 to \$105, a 5% increase. In light of that loss, the hypothetical Inverse Fund's beta at the point at which John invests is -211%. During the remainder of Day 2, the underlying security increase from \$105 to \$109 a gain of 3.81%, and John's investment declines by 8.04% (which is the underlying security gain of 3.81% multiplied by the -211% beta that John received) to \$9.11. John continues to hold the investment through the close of trading on Day 3, during which the underlying security declines from \$109 to \$90, a loss of 17.43%. John's investment increases by 34.86%, from \$9.11 to \$12.29. For the period of John's investment, the underlying security decreased from \$105 to \$90, a decrease of 14.29%, while John's investment increased from \$10.00 to \$12.29, a 22.87% gain. The volatility of the underlying security affected the correlation between the underlying security's return for the period and John's return. In this situation, John gained less than -200% of the return of the underlying security. John's investment was also affected because he missed the first 5% move of the underlying security and had a beta of -211% for the remainder of Day 2.

Market Volatility. The Funds seeks to provide a return which is -2X the daily performance of the Underlying Security. The Funds do not attempt to, and should not be expected to, provide returns which are -2X the return of the Underlying Security for periods other than a single day. The Funds rebalance its portfolio on a daily basis, increasing exposure in response to that day's gains or reducing exposure in response to that day's losses.

Daily rebalancing will impair each Fund's performance if its Underlying Security experiences volatility. For instance, a Fund would be expected to lose 17.10% (as shown in Table 1 below) if its Underlying Security provided no return over a one-year period and experienced annualized volatility of 25%. If an Underlying Security's annualized volatility were to rise to 50%, the hypothetical loss for a one-year period for the applicable Fund widens to approximately -52.80%.

Table 1

Volatility Range	Fund Loss
10%	-3%
25%	-17.10%
50%	-52.80%
75%	-81.50%
100%	-95%

Note that at higher volatility levels, there is a chance of a complete loss of Fund assets even if the value of the Underlying Security is flat. For instance, if annualized volatility of an Underlying Security were 100%, the Fund would be expected to lose -95%, even if the underlying security returned 0% for the year.

Table 2 shows the annualized historical volatility rate for the Underlying Security over the periods noted.

Since market volatility has negative implications for the Funds which rebalance daily, investors should be sure to monitor and manage their investments in the Funds particularly in volatile markets. The negative implications of volatility in Table 1 can be combined with the recent volatility ranges of the Underlying Security in Table 2 to give investors some sense of the risks of holding the Fund for longer periods. Historical volatility and performance for the Underlying Security is not likely indicative of future volatility and performance.

Table 2 – Historic Volatility of the Underlying Security

Underlying Security Ticker: Name	Historical Volatility Rate
RGTI: Rigetti Computing, Inc.	129.33 % ¹
QBTS: D-Wave Quantum Inc.	123.08 % ²

1. Period April 22, 2021 through May 21, 2025.
2. Period December 11, 2020 through May 21, 2025.

The Projected Returns of the Funds for Intra-Day Purchases. Because each Fund rebalances its portfolio once daily, an investor who purchases Shares intra-day will likely have more, or less, than -200% investment exposure to the Underlying Security. The exposure to the Underlying Security received by an investor who purchases the Fund intra-day will differ from the Fund’s stated daily investment objective (e.g., -200%) by an amount determined by the movement of the Underlying Security from its value at the end of the prior day. If the Underlying Security moves in a direction favorable to the Fund between the close of the market on one trading day through the time on the next trading day when the investor purchases Fund shares, the investor will receive less exposure to such Underlying Security than the stated Fund’s daily investment objective (e.g., -200%). Conversely, if an Underlying Security moves in a direction adverse to the Fund, the investor will receive more exposure to such Underlying Security than the stated fund daily -2X investment objective (e.g., -200%).

Table 3 below indicates the hypothetical exposure to the underlying security that an intra-day purchase of the Hypothetical Inverse Fund would be expected to provide based upon the movement in the value of the underlying security from the close of the market on the prior trading day. Such exposure holds until a subsequent sale on that same trading day or until the close of the market on that trading day. For instance, if the underlying security has moved 5% in a direction favorable to a Hypothetical Inverse Fund, the investor would receive exposure to the performance of the underlying security from that point until the investor sells later that day or the end of the day equal to approximately 191% of the investor’s investment.

Conversely, if the underlying security moves 5% in a direction unfavorable to the Hypothetical Inverse Fund, an investor at that point would receive exposure to the performance of the underlying security from that point until the investor sells later that day or the end of the day equal to approximately 211% of the investor’s investment.

The table below includes a range of hypothetical underlying security moves from 20% to -20% and the corresponding exposure for the Hypothetical Inverse Fund. Movement of the underlying security beyond the range noted below will result in exposure further from the Hypothetical Inverse Fund’s daily investment objective.

Table 3

Underlying Security Move	Resulting Exposure for Hypothetical Inverse Fund
-20%	-171%
-15%	-177%
-10%	-183%
-5%	-191%
0%	-200%
5%	-211%
10%	-225%
15%	-243%
20%	-267%

The Projected Returns of the Funds for Periods Other Than a Single Trading Day. Each Fund seeks -2X investment results on a daily basis — from the close of regular trading on one trading day to the close on the next trading day — which should not be equated with seeking an investment objective for any other period. For instance, if an Underlying Security gains 10% for a week, the applicable Fund should not be expected to provide a return of -20% for the week even if it meets its daily investment objective throughout the week. This is true because of the financing charges noted above but also because the pursuit of daily goals may result in daily -2X compounding, which means that the return of the applicable Underlying Security over a period of time greater than one day multiplied by such Fund’s daily investment objective (e.g., -200%) will not generally equal the Fund’s performance over that same period. In addition, the effects of compounding become greater the longer shares of a Fund are held beyond a single trading day.

The following tables set out a range of hypothetical daily performances during a given 10 trading days for a Hypothetical Inverse Fund compared to the underlying security and demonstrate how changes in the underlying security’s hypothetical performance would compare to the performance of a Hypothetical Inverse Fund for a trading day and cumulatively up to, and including, the entire 10 trading day period. The charts are based on a hypothetical \$100 investment in hypothetical funds at NAV over a 10-trading day period and do not reflect fees or expenses of any kind.

Table 4a – The Underlying Security Lacks a Clear Trend

Underlying Security		Hypothetical Inverse Fund				
	Share Price	Daily Performance	Cumulative Performance	NAV	Daily Performance	Cumulative Performance
	\$100.00			\$100.00		
Day 1	\$105.00	5.00%	5.00%	\$90.00	-10.00%	-10.00%
Day 2	\$110.00	4.76%	10.00%	\$80.48	-10.58%	-19.52%
Day 3	\$100.00	-9.09%	0.00%	\$98.66	22.59%	-1.34%
Day 4	\$90.00	-10.00%	-10.00%	\$118.66	20.27%	18.66%
Day 5	\$85.00	-5.56%	-15.00%	\$129.78	9.37%	29.78%
Day 6	\$100.00	17.65%	0.00%	\$94.48	-27.20%	-5.52%
Day 7	\$95.00	-5.00%	-5.00%	\$104.48	10.58%	4.48%
Day 8	\$100.00	5.26%	0.00%	\$93.96	-10.07%	-6.04%
Day 9	\$105.00	5.00%	5.00%	\$83.96	-10.64%	-16.04%
Day 10	\$100.00	-4.76%	0.00%	\$93.48	11.34%	-6.52%

The cumulative performance of the hypothetical underlying security in Table 5 is 0% for 10 trading days. The return of the Hypothetical Inverse Fund for the 10-trading day period is -6.52%. The volatility of the underlying security’s performance and lack of a clear trend results in performance for the Hypothetical Inverse Fund for the period which bears little relationship to the performance of the underlying security for the 10-trading day period.

Table 5 – The Underlying Security Rises in a Clear Trend

Underlying Security		Hypothetical Inverse Fund				
	Share Price	Daily Performance	Cumulative Performance	NAV	Daily Performance	Cumulative Performance
	\$100.00			\$100.00		
Day 1	\$102.00	2.00%	2.00%	\$96.00	-4.00%	-4.00%
Day 2	\$104.00	1.96%	4.00%	\$92.08	-4.08%	-7.92%
Day 3	\$106.00	1.92%	6.00%	\$88.24	-4.17%	-11.76%
Day 4	\$108.00	1.89%	8.00%	\$84.46	-4.28%	-15.54%
Day 5	\$110.00	1.85%	10.00%	\$80.76	-4.38%	-19.24%
Day 6	\$112.00	1.82%	12.00%	\$77.12	-4.51%	-22.88%
Day 7	\$114.00	1.79%	14.00%	\$73.54	-4.64%	-26.46%
Day 8	\$116.00	1.75%	16.00%	\$70.04	-4.76%	-29.96%
Day 9	\$118.00	1.72%	18.00%	\$66.60	-4.91%	-33.40%
Day 10	\$120.00	1.69%	20.00%	\$63.22	-5.08%	-36.78%

The cumulative performance of the underlying security in Table 5 is 20% for 10 trading days. The return of the Hypothetical Inverse Fund for the 10-trading day period is -36.78%. In this case, because of the positive underlying security trend, the Hypothetical Inverse Fund's decline is less than -200% of the underlying security's gain for the 10-trading day period.

Table 6 – The Underlying Security Declines in a Clear Trend

Underlying Security		Hypothetical Inverse Fund				
	Share Price	Daily Performance	Cumulative Performance	NAV	Daily Performance	Cumulative Performance
	\$100.00			\$100.00		
Day 1	\$98.00	-2.00%	-2.00%	\$104.00	4.00%	4.00%
Day 2	\$96.00	-2.04%	-4.00%	\$108.08	3.92%	8.08%
Day 3	\$94.00	-2.08%	-6.00%	\$112.24	3.85%	12.24%
Day 4	\$92.00	-2.13%	-8.00%	\$116.50	3.80%	16.50%
Day 5	\$90.00	-2.17%	-10.00%	\$120.84	3.73%	20.84%
Day 6	\$88.00	-2.22%	-12.00%	\$125.28	3.67%	25.28%
Day 7	\$86.00	-2.27%	-14.00%	\$129.82	3.62%	29.82%
Day 8	\$84.00	-2.33%	-16.00%	\$134.48	3.59%	34.48%
Day 9	\$82.00	-2.38%	-18.00%	\$139.24	3.54%	39.24%
Day 10	\$80.00	-2.44%	-20.00%	\$144.12	3.50%	44.12%

The cumulative performance of the underlying security in Table 6 is -20% for 10 trading days. The return of the Hypothetical Inverse Fund for the 10-trading day period is 44.12%. In this case, because of the negative hypothetical underlying security trend, the Hypothetical Inverse Fund's gains are greater than -200% of the hypothetical underlying security's decline for the 10-trading day period.

Manager of Managers Structure

Although the Funds are not currently sub-advised, the Funds and the Adviser have received exemptive relief from the SEC permitting the Adviser (subject to certain conditions and the approval of the Board) to change or select new unaffiliated sub-advisers without obtaining shareholder approval. The relief also permits the Adviser to materially amend the terms of agreements with an unaffiliated sub-adviser (including an increase in the fee paid by the Adviser to the unaffiliated sub-adviser (and not paid by the Fund)) or to continue the employment of an unaffiliated sub-adviser after an event that would otherwise cause the automatic termination of services with Board approval, but without shareholder approval. Shareholders will be notified of any unaffiliated sub-adviser changes. The Adviser has the ultimate responsibility, subject to oversight by the Board, to oversee a sub-adviser and recommend their hiring, termination and replacement. The exemptive relief applies to sub-advisers that are either wholly-owned by the Adviser or its parent company, as well as to unaffiliated sub-advisers, including those whose affiliation arises solely from their sub-advisory relationship.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. However, registered investment companies are permitted to invest in other investment companies beyond the limits set forth in Section 12(d)(1) in rules under the 1940 Act, subject to certain conditions. The Fund may rely on Rule 12d1-4 of the 1940 Act, which provides an exemption from Section 12(d)(1) that allows the Fund to invest beyond the limits set forth in Section 12(d)(1) if the Fund satisfies certain conditions specified in Rule 12d1-4, including, among other conditions, that the Fund and its advisory group will not control (individually or in the aggregate) an acquired fund (e.g., hold more than 25% of the outstanding voting securities of an acquired fund that is a registered open-end management investment company).

Principal Risks of Investing in the Fund

There can be no assurance that the Funds will achieve their respective investment objectives. The following information is in addition to, and should be read along with, the description of each Fund's principal investment risks in the section titled "Fund Summary—Principal Investment Risks" above. Following the Underlying Security risks, the Funds' remaining principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Funds, regardless of the order in which it appears.

RGTI Price Appreciation Risk. As part of the Fund's inverse investment strategy, the Fund purchases and sells swap contracts and options contracts that are based on the share price of RGTI common stock (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect -2X exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

- *Indirect Investment in RGTI Risk.* Rigetti Computing, Inc. is not affiliated with the Trust, the Fund, the Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Rigetti Computing, Inc., but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.
- *RGTI Good Performance Risk.* RGTI may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. RGTI regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. RGTI's guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If RGTI's guidance is accurate or varies positively from actual results, RGTI's share price could increase significantly and, as a result, the Fund may suffer significant losses.
- *Industry Recognition and Analyst Coverage Risk.* Positive recognition from industry analysts, awards for product excellence, or inclusion in prestigious industry reports can enhance RGTI's reputation and credibility among investors. Favorable analyst ratings, upgrades, or bullish forecasts for the company's future performance can drive investor enthusiasm and contribute to a rise in RGTI's stock price.

QBTS Price Appreciation Risk. As part of the Fund's inverse investment strategy, the Fund purchases and sells swap contracts and options contracts that are based on the share price of QBTS common stock (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect -2X exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

- *Indirect Investment in QBTS Risk.* D-Wave Quantum Inc. is not affiliated with the Trust, the Fund, the Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of D-Wave Quantum Inc., but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

- *QBTS Good Performance Risk.* QBTS may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. QBTS regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. QBTS's guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If QBTS's guidance is accurate or varies positively from actual results, QBTS's share price could increase significantly and, as a result, the Fund may suffer significant losses.
- *Industry Recognition and Analyst Coverage Risk.* Positive recognition from industry analysts, awards for product excellence, or inclusion in prestigious industry reports can enhance QBTS's reputation and credibility among investors. Favorable analyst ratings, upgrades, or bullish forecasts for the company's future performance can drive investor enthusiasm and contribute to a rise in QBTS's stock price.

Compounding and Market Volatility Risk. Each Fund's performance for periods greater than a trading day will be the result of each day's returns compounded over the period, which is likely to differ from -200% of the applicable Underlying Security's performance, before fees and expenses. Compounding has a significant impact on funds that are inverse leveraged and that rebalance daily. The impact of compounding becomes more pronounced as volatility and holding periods increase and will impact each shareholder differently depending on the period of time an investment in the Fund is held and the volatility of the Underlying Security during the shareholder's holding period of an investment in a Fund.

The chart below provides examples of how an Underlying Security volatility could affect the corresponding Fund's performance. Fund performance for periods greater than one single day can be estimated given any set of assumptions for the following factors: a) Underlying Security volatility; b) Underlying Security's performance; c) period of time; d) financing rates associated with leveraged exposure; e) other Fund expenses; and f) the Underlying Security's dividends. The chart below illustrates the impact of two principal factors – Underlying Security volatility and performance – on Fund performance. The chart shows estimated Fund returns for a number of combinations of Underlying Security volatility and performance over a one-year period. Performance shown in the chart assumes that (i) there were no Fund expenses; and (ii) borrowing rates (needed to obtain a leveraged short exposure) of 0%. If Fund expenses and/or actual borrowing/lending rates were reflected, the estimated returns would be lower than those shown. Particularly during periods where the Underlying Security experiences higher volatility, compounding will cause results for periods longer than a trading day to vary from -200% of the performance of its Underlying Security.

As shown in the chart below, a Fund would be expected to lose 17.1% if the Underlying Security provided no return over a one-year period during which the Underlying Security experienced annualized volatility of 25%. At higher ranges of volatility, there is a chance of a significant loss of value in the Fund, even if the Underlying Security return is flat.

For instance, if the Underlying Security's annualized volatility is 100%, the Fund would be expected to lose 95% of its value, even if the cumulative Underlying Security's return for the year was 0%. Areas shaded red (or dark gray) represent those scenarios where a Fund can be expected to return less than -200% of the performance of its Underlying Security and those shaded green (or light gray) represent those scenarios where the Fund can be expected to return more than -200% of the performance of its Underlying Security. A Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Tracking Error Risk" below.

One year performance of the stock Return	-200% of one year performance of the stock Return	Volatility Rate (Annualized)				
		10%	25%	50%	75%	100%
-60%	120%	506.50%	418.10%	195.20%	-6.80%	-68.90%
-50%	100%	288.20%	231.60%	88.20%	-26.00%	-80.10%
-40%	80%	166.90%	130.30%	31.20%	-45.60%	-86.10%
-30%	60%	98.10%	69.20%	-3.60%	-62.20%	-89.90%
-20%	40%	51.60%	29.50%	-26.20%	-71.10%	-92.20%
-10%	20%	19.80%	2.30%	-41.70%	-77.20%	-93.90%
0%	0%	-3.00%	-17.10%	-52.80%	-81.50%	-95.00%
10%	-20%	-19.80%	-31.50%	-61.00%	-84.70%	-95.90%
20%	-40%	-32.60%	-42.40%	-67.20%	-87.20%	-96.50%
30%	-60%	-42.60%	-50.90%	-72.00%	-89.10%	-97.10%
40%	-80%	-50.50%	-57.70%	-75.90%	-90.60%	-97.50%
50%	-100%	-56.90%	-63.20%	-79.00%	-91.80%	-97.80%
60%	-120%	-62.10%	-67.60%	-81.50%	-92.80%	-98.10%

Each Underlying Security’s annualized historical volatility rate for the periods noted was as shown in the table below. Also, each Underlying Security’s highest volatility rate for any one calendar year during this period was as shown in the applicable Fund’s summary section above and volatility for a shorter period of time may have been substantially higher. The Underlying Security’s annualized performance during this period was as shown in the applicable Fund’s summary section above. Historical Underlying Security volatility and performance are not indications of what Underlying Security volatility and performance will be in the future. The volatility of instruments that reflect the value of the Underlying Security, such as swaps, may differ from the volatility of the Underlying Security.

Underlying Security Ticker: Name	Historical Volatility Rate
RGTI: Rigetti Computing, Inc.	129.33% ¹
QBTS: D-Wave Quantum Inc.	123.08% ²

1. Period April 22, 2021 through May 21, 2025.
2. Period December 11, 2020 through May 21, 2025.

Counterparty Risk. Each Fund is subject to counterparty risk by virtue of its investments in derivatives which exposes the Fund to the risk that the counterparty will not fulfill its obligation to the Fund. Counterparty risk may arise because of the counterparty’s financial condition (*i.e.*, financial difficulties, bankruptcy, or insolvency), market activities and developments, or other reasons, whether foreseen or not. A counterparty’s inability to fulfill its obligation may result in significant financial loss to a Fund and the Fund may be unable to recover its investment from such counterparty or may obtain a limited and/or delayed recovery.

Counterparties may seek to hedge their exposure to individual clients (such as a Fund) by establishing offsetting exposures with other clients, however, there is no guarantee that counterparties will do so under all circumstances. Should a counterparty (e.g., a swap counterparty) terminate its relationship with a Fund, the Fund will seek to utilize other counterparties to seek to maintain its exposures. In addition, a Fund may use options contracts to seek to generate the leverage necessary to implement its strategy. The use of options contracts introduces distinct risks, including heightened volatility, particularly intraday. While options may provide an ancillary benefit of mitigating some losses under specific scenarios, such as severe market downturns, their inherent leverage and rapid price fluctuations can amplify a Fund’s performance volatility and lead to greater risks of substantial losses. Refer to “Derivatives Risk – Options Contracts” for additional information on the risks of investing in options.

In addition, each Fund may enter into swap agreements with a limited number of counterparties, which may increase the Fund’s exposure to counterparty credit risk. Further, there is a risk that no suitable counterparties will be willing to enter into, or continue to enter into, transactions with a Fund and, as a result, the Fund may not be able to achieve its investment objective.

Daily Correlation/Tracking Risk. There is no guarantee that a Fund will achieve a high degree of inverse correlation to the Underlying Security and therefore achieve its daily inverse investment objective. To achieve a high degree of 2 times inverse correlation with the Underlying Security, each Fund seeks to rebalance its portfolio daily to keep exposure consistent with its daily inverse investment objective. The possibility of a Fund being materially over-exposed (meaning providing more than -200% exposure to the Underlying Security – *i.e.*, -201% or greater) or under-exposed (meaning providing less than -200% exposure to the Underlying Security – *i.e.*, -199% or less) to the Underlying Security increases on days when the Underlying Security is volatile near the close of the trading day. Market disruptions, regulatory restrictions and extreme volatility will also adversely affect a Fund’s ability to adjust exposure to the required levels. If there is a significant intra-day market event and/or the Underlying Security experiences a significant increase or

decline, the Fund may not meet its investment objective, be able to rebalance its portfolio appropriately, or may experience significant premiums or discounts, or widened bid-ask spreads.

Each Fund may have difficulty achieving its daily 2 times inverse investment objective due to fees, expenses, transaction costs, financing costs related to the use of derivatives, investments in ETFs, directly or indirectly, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or derivatives held by the Fund. Each Fund may be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being over- or under-exposed to its Underlying Security. Each Fund may take or refrain from taking positions to improve the tax efficiency or to comply with various regulatory restrictions, either of which may negatively impact the Fund's 2 times inverse correlation to the Underlying Security.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. Each Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, leverage, imperfect daily correlations with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When a Fund uses derivatives, there may be imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested.

Each Fund will be subject to regulatory constraints relating to level of value at risk that the Fund may incur through its derivative portfolio. If a Fund exceeds these regulatory thresholds, it may adjust its portfolio. These adjustments may cause the Fund to fail to achieve investment results, before fees and expenses, that correspond to -200% of the daily performance of the Underlying Security and may result in substantially lower returns during these periods. To the extent a Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily inverse performance for the Fund.

In addition, each Fund's investments in derivatives are subject to the following risks:

Swap Agreements. The use of swap transactions is a highly specialized activity, which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. Whether a Fund will be successful in using swap agreements to achieve its investment goal depends on the ability of the Adviser to structure such swap agreements in accordance with the Fund's investment objective and to identify counterparties for those swap agreements. If the Adviser, is unable to enter into swap agreements that provide inverse exposure to the Underlying Security, the corresponding Fund may not meet its stated investment objective. Additionally, any financing, borrowing or other costs associated with using swap transactions may also have the effect of lowering a Fund's return.

The swap agreements in which each Fund invests are generally traded in the over-the-counter market, which generally has less transparency than exchange-traded derivatives instruments. In a standard swap transaction, two parties agree to exchange the return (or differentials in rates of return) earned or realized on particular predetermined reference assets or underlying securities or instruments. The gross return to be exchanged or swapped between the parties is calculated based on a notional amount or the return on or change in value of a particular dollar amount invested in a basket of securities.

If an Underlying Security has a dramatic move that causes a material decline in the corresponding Fund's net assets, the terms of a swap agreement between the Fund and its counterparty may permit the counterparty to immediately close out the swap transaction with the Fund. In that event, the Fund may be unable to enter into another swap agreement or invest in other derivatives to achieve exposure consistent with the Fund's investment objective. This may prevent the Fund from achieving its inverse investment objective, even if its Underlying Security later reverses all or a portion of its movement.

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. The value of the options contracts in which the Fund invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does

not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses. The use of options to generate leverage introduces additional risks, including significant potential losses if the market moves unfavorably. The leverage inherent in options can amplify both gains and losses, leading to increased volatility and potential for substantial losses, particularly in periods of market uncertainty or low liquidity. Additionally, the Fund may incur losses if the value of the Underlying Security moves against its positions, potentially resulting in a complete loss of the premium paid.

ETF Risks

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. Each Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. Each Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, a Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, a Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, a Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. The costs associated with cash redemptions may include brokerage costs that the Fund may not have incurred if it had made the redemptions in-kind. These costs could be imposed on a Fund, decreasing its NAV, to the extent these costs are not offset by a transaction fee payable by an authorized participant.

Costs of Buying or Selling Shares. Buying or selling Shares involves certain costs, including brokerage commissions, other charges imposed by brokers, and bid-ask spreads. The bid-ask spread represents the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares. The spread varies over time based on the Shares’ trading volume and market liquidity. The spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as The Nasdaq Stock Market, LLC (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of a Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. This adverse effect on liquidity for a Fund’s shares may lead to wider bid-ask spreads and differences between the market price of the Fund’s shares and the underlying value of the shares.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which a Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Adviser. Markets for the financial instruments in which a Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. These situations may have an impact on the liquidity of the Funds own shares.”

Economic and Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), deflation (or expectations for deflation), interest rates, global demand for particular products or resources, market instability, financial system instability, debt crises and downgrades, embargoes, tariffs, sanctions and other trade barriers, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics. The imposition by the U.S. of tariffs on goods imported from foreign countries and reciprocal tariffs levied on U.S. goods by those countries also may lead to volatility and instability in domestic and foreign markets.

Fixed Income Securities Risk. When a Fund invests in fixed income securities, the value of your investment in that Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by a Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by a Fund, possibly causing the Fund's Share price and total return to be reduced and fluctuate more than other types of investments.

High Portfolio Turnover Risk. Daily rebalancing of each Fund's holdings pursuant to its daily investment objective causes a much greater number of portfolio transactions when compared to most ETFs. Additionally, active market trading of each Fund's Shares on exchanges (such as the Exchange), could cause more frequent creation and redemption activities, which could increase the number of portfolio transactions. Frequent and active trading may lead to higher transaction costs because of increased broker commissions resulting from such transactions. In addition, there is the possibility of significantly increased short-term capital gains (which will be taxable to shareholders as ordinary income when distributed to them). Each Fund calculates portfolio turnover without including the short-term cash instruments or derivative transactions that comprise the majority of the Fund's trading. As such, if a Fund's extensive use of derivative instruments were reflected, the calculated portfolio turnover rate would be significantly higher.

Intra-Day Investment Risk. Each Fund seeks investment results from the close of the market on a given trading day until the close of the market on the subsequent trading day. The exact exposure of an investment in a Fund intraday in the secondary market is a function of the difference between the value of the Underlying Security at the market close on the first trading day and the value of the Underlying Security at the time of purchase. If the Underlying Security declines in value, the Fund's net assets will rise by the same amount as the Fund's exposure. Conversely, if the Underlying Security gains in value, the Fund's net assets will decline by the same amount as the Fund's exposure. Thus, an investor that purchases Shares intra-day may experience performance that is greater than, or less than, the Fund's stated inverse performance of the Underlying Security.

If there is a significant intra-day market event and/or the securities of the Underlying Security experience a significant increase or decrease, a Fund may not meet its investment objective or rebalance its portfolio appropriately.

Liquidity Risk. Some securities held by a Fund may be difficult to sell or be illiquid, particularly during times of market turmoil. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If a Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent a Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Funds.

Money Market Instrument Risk. Each Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments may lose money.

Newer Fund Risk. Each Fund is a recently organized management investment company with a limited operating history. As a result, prospective investors have only a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because of each Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause a Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. Each Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. Each Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect a Fund's ability to meet its investment objective. Although the Funds and the Funds' investment advisor seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Rebalancing Risk. If for any reason a Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to a Underlying Security that is significantly greater or less than its stated investment objective. As a result, a Fund may be exposed to leverage risk because it had not been properly rebalanced and may not achieve its investment objective.

Short Sale Exposure Risk. Each Fund will seek inverse or "short" exposure through financial instruments, which would cause a Fund to be exposed to certain risks associated with selling short. These risks include, under certain market conditions, an increase in the volatility and decrease in the liquidity of the instruments underlying the short position, which may lower the Fund's return, result in a loss, have the effect of limiting the Fund's ability to obtain inverse exposure through financial instruments, or require the Fund to seek inverse exposure through alternative investment strategies that may be less desirable or more costly to implement. To the extent that, at any particular point in time, the instruments underlying the short position may be thinly traded or have a limited market, including due to regulatory action, the Fund may be unable to meet its investment objective due to a lack of available securities or counterparties. During such periods, the Fund's ability to issue additional Shares may be adversely affected. Obtaining inverse exposure through these instruments may be considered an aggressive investment technique. Any income, dividends or payments by any assets underlying the Fund's short positions, if any, would negatively impact the Fund. The Fund could lose an amount greater than its net assets in the event its Underlying Security increases more than 50%.

Single Issuer Risk. Issuer-specific attributes may cause an investment in a Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of each Fund, which focuses on an individual security, may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole. Additionally, each Fund will seek to employ its investment strategy as it relates to the underlying issuer regardless of whether the company has strong earnings reports, or provides positive future guidance, dividend increases, share buybacks, or engages in strategic acquisitions and product launches. Additionally, each Fund will seek to employ its investment strategy as it relates to the underlying issuer regardless of whether there are favorable industry trends, regulatory approvals, analyst upgrades, strategic partnerships, debt reduction, or improved economic conditions.

Tax Risk. Each Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, a Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, each Fund will attempt to ensure that the value of swap contracts and options on shares of a single issuer does not exceed 25% of the Fund's value at the close of any quarter. If the value of swap contracts and options on shares of a single issuer were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If a Fund fails to timely cure, it may no longer be eligible to be treated as a RIC. In order to qualify for the favorable tax treatment generally available to regulated investment companies, a Fund must satisfy certain diversification and other requirements. In particular, each Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps) that may be entered into by the Funds is unclear. The IRS has never definitively stated how assets such as swaps or futures or forward contracts should be valued for purposes of these diversification tests. The better view is that such contracts should be valued for these purposes at the amount for which a Fund could settle them, and not the full value of any reference security. In addition, the application of these requirements to a Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If a Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Tracking Error Risk. Tracking error is the divergence of a Fund's performance from that of its investment objective which aims to replicate -2X the daily percentage change in the price of the corresponding Underlying Security. Tracking error may occur for a number of reasons. Tracking error may occur because of transaction costs, a Fund's holding of cash, differences in accrual of dividends, being under- or overexposed to the Underlying Security or the need to meet new or existing regulatory requirements. Tracking error risk may be heightened during times of market volatility or other unusual market conditions such as market disruptions. Each Fund may be

required to deviate from its investment objectives, and therefore experience tracking error, as a result of market restrictions or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Adviser and its affiliates.

Trading Halt Risk. Although each Underlying Security's shares are listed for trading on an exchange, there can be no assurance that an active trading market for such shares will be available at all times and the Exchange may halt trading of such shares in certain circumstances. A halt in trading in an Underlying Security's shares is expected, in turn, to result in a halt in the trading in the corresponding Fund's Shares. Trading in an Underlying Security's and/or the corresponding Fund's Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in the Underlying Security's and/or Fund's Shares inadvisable. In addition, trading in each Underlying Security's and/or Fund's Shares on an exchange is subject to trading halts caused by extraordinary market volatility pursuant to exchange "circuit breaker" rules." In the event of a trading halt for an extended period of time, the relevant Fund may be unable to execute arrangements with swap counterparties that are necessary to implement the Fund's investment strategy.

U.S. Government and U.S. Agency Obligations Risk. Each Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

PORTFOLIO HOLDINGS INFORMATION

Information about each Fund's daily portfolio holdings will be available on the Funds' website at www.defianceetfs.com. A complete description of each Fund's policies and procedures with respect to the disclosure of a Fund's portfolio holdings is available in the Fund's Statement of Additional Information (the "SAI").

MANAGEMENT

Investment Adviser - Tidal

Tidal Investments LLC, a Tidal Financial Group company, located at 234 West Florida Street, Suite 203, Milwaukee, Wisconsin 53204, is an SEC-registered investment adviser and a Delaware limited liability company. Tidal was founded in March 2012 and Tidal is dedicated to understanding, researching and managing assets within the expanding ETF universe. As of May 31, 2025, Tidal had assets under management of approximately \$33.62 billion and served as the investment adviser or sub-adviser for 250 registered funds.

Tidal serves as investment adviser to the Funds and has overall responsibility for the general management and administration of the Funds pursuant to an investment advisory agreement with the Trust, on behalf of each Fund (the "Advisory Agreement"). The Adviser is responsible for the day-to-day management of the Funds' portfolios, including determining the securities purchased and sold by each Fund and trading portfolio securities for each Fund. The Adviser also arranges for transfer agency, custody, fund administration, and all other related services necessary for the Funds to operate.

For the services provided to the Funds, each Fund pays the Adviser a unitary management fee of 1.29%, which is calculated daily and paid monthly, at an annual rate based on such Fund's average daily net assets.

Under the Advisory Agreement, in exchange for a single unitary management fee from a Fund, the Adviser has agreed to pay all expenses incurred by such Fund except for interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by a Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, litigation expenses, other non-routine or extraordinary expense (collectively, the "Excluded Expenses"), and the unitary management fee payable to the Adviser.

Advisory Agreement

A discussion regarding the basis for the Board's approval of each Fund's Advisory Agreement is available in the Funds' Semi-Annual Certified Shareholder Report on Form N-CSR for the period ending October 31, 2025.

Portfolio Manager

The following individual has served as portfolio manager of each Fund since inception in 2025. Mr. Foy is primarily responsible for the day-to-day management of each Fund.

Stephen Foy, Portfolio Manager for the Adviser

Mr. Foy joined Tidal in 2024 and is Senior Vice President of Trading and Co-Head of Tidal's ETF Trading and Portfolio Management team. He previously oversaw Invesco ETF Services from 2021 to 2024, including middle and back-office operations as well as portfolio implementation for all equity and alternative ETFs. Mr. Foy holds an MBA from Johns Hopkins University and spent five years in ETF Portfolio Management at ProShares from 2016 to 2021. He brings a robust portfolio management background across a wide array of strategies and asset classes. Throughout his career, he has led global teams through hundreds of product launches, organizational changes, and technological and operational transformations.

The Funds' SAI provides additional information about the portfolio manager's compensation structure, other accounts that the portfolio manager manages, and the portfolio manager's ownership of Shares.

FUND SPONSOR

The Adviser has entered into a fund sponsorship agreement with Defiance ETFs, LLC ("Defiance") pursuant to which Defiance is a sponsor to the Funds. Under these arrangements, Defiance has agreed to provide financial support (as described below) to the Funds. Every month, unitary management fees for the Funds are calculated and paid to the Adviser, and the Adviser retains a portion of the unitary management fees from the Funds.

In return for their financial support for the Funds, the Adviser has agreed to pay Defiance a portion of any remaining profits generated by unitary management fee the Funds. If the amount of the unitary management fees for a Fund exceeds a Fund's operating expenses (including the sub-advisory fee) and the Adviser-retained amount, that excess amount is considered "remaining profit." In that case, the Adviser will pay a portion of the remaining profits to Defiance.

Further, if the amount of the unitary management fee for a Fund is less than a Fund's operating expenses and the Adviser-retained amount, Defiance is obligated to reimburse the Adviser for a portion of the shortfall.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to the Funds, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor (defined below), and that has been accepted by the Funds' transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

In order to purchase Creation Units of a Fund, an AP must generally deposit a designated portfolio of equity securities (the "Deposit Securities") and/or a designated amount of U.S. cash. Purchases and redemptions of Creation Units primarily with cash, rather than through in-kind delivery of portfolio securities, may cause the Funds to incur certain costs. These costs could include brokerage costs or taxable gains or losses that it might not have incurred if it had made redemption in-kind. These costs could be imposed on a Fund, and thus decrease the Funds' NAV, to the extent that the costs are not offset by a transaction fee payable by an AP.

Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC’s participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or “street name” through your brokerage account.

Frequent Purchases and Redemptions of Shares

None of the Funds impose restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by Fund shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with a Fund, are an essential part of the ETF process and help keep Share trading prices in line with the NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, each Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by such Fund in effecting trades. In addition, the Fund and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

Each Fund’s NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange (“NYSE”), generally 4:00 p.m. Eastern Time, each day the NYSE is open for regular business. The NAV for the Fund is calculated by dividing the Funds’ net assets by its Shares outstanding.

In calculating its NAV, each Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security or other asset held by a Fund or is determined to be unreliable, the security or other asset will be valued at fair value estimates under guidelines established by the Adviser (as described below).

Fair Value Pricing

The Board has designated the Adviser as the “valuation designee” for the Fund under Rule 2a-5 of the 1940 Act, subject to its oversight. The Adviser has adopted procedures and methodologies, which have been approved by the Board, to fair value Fund investments whose market prices are not “readily available” or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been delisted or has had its trading halted or suspended; (ii) an investment’s primary pricing source is unable or unwilling to provide a price; (iii) an investment’s primary trading market is closed during regular market hours; or (iv) an investment’s value is materially affected by events occurring after the close of the investment’s primary trading market. Generally, when fair valuing an investment, the Adviser will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer’s business, recent trades or offers of the investment, general and/or specific market conditions, and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Adviser-adopted valuation procedures. The Adviser will fair value Fund investments whose market prices are not “readily available” or are deemed to be unreliable. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the investment upon the sale of such investment.

Investments by Other Registered Investment Companies in the Fund

Section 12(d)(1) of the 1940 Act restricts investments by registered investment companies in the securities of other investment companies, including Shares. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in Section 12(d)(1), subject to certain terms and conditions set forth in an SEC exemptive rule under the 1940 Act, including that such investment companies enter into an agreement with the Fund.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Funds intend to pay out dividends and interest income, if any, annually, and distribute any net realized capital gains to its shareholders at least annually. The Funds will declare and pay income and capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

Each Fund intends to qualify each year for treatment as a RIC under the Code. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only).

The following general discussion of certain U.S. federal income tax consequences is based on provisions of the Code and the regulations issued thereunder as in effect on the date of this Prospectus. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

Taxes on Distributions

For federal income tax purposes, distributions of net investment income are generally taxable to shareholders as ordinary income or qualified dividend income. Taxes on distributions of net capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned their Shares. Sales of assets held by such Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by the Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains to shareholders. Distributions of short-term capital gain will generally be taxable to shareholders as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by a Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided certain holding period and other requirements are met. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by such Fund from U.S. corporations, subject to certain limitations. Given the investment strategies of the Funds, it is unlikely that any dividends paid by a Fund will be qualified dividends or be eligible for the corporate dividends paid deduction.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from a Fund.

In addition to the federal income tax, certain individuals, trusts, and estates may be subject to a Net Investment Income (“NII”) tax of 3.8%. The NII tax is imposed on the lesser of: (i) a taxpayer’s investment income, net of deductions properly allocable to such income; or (ii) the amount by which such taxpayer’s modified adjusted gross income exceeds certain thresholds (\$250,000 for married individuals filing jointly, \$200,000 for unmarried individuals and \$125,000 for married individuals filing separately). A Fund’s distributions are includable in a shareholder’s investment income for purposes of this NII tax. In addition, any capital gain realized by a shareholder upon a sale or redemption of Fund shares is includable in such shareholder’s investment income for purposes of this NII tax.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable to you even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares’ NAV when you purchased your Shares).

You may wish to avoid investing in a Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable to you even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Fund may, under certain circumstances, report all or a portion of a dividend as an “interest-related dividend” or a “short-term capital gain dividend,” which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under the Foreign Account Tax Compliance Act (“FATCA”), the Funds may be required to withhold a generally nonrefundable 30% tax on distributions of net investment income paid to (A) certain “foreign financial institutions” unless such foreign financial institution agrees to verify, monitor, and report to the IRS the identity of certain of its account-holders, among other items (or unless such entity is otherwise deemed compliant under the terms of an intergovernmental agreement between the United States and the foreign financial institution’s country of residence), and (B) certain “non-financial foreign entities” unless such entity certifies to the Fund that it does not have any substantial U.S. owners or provides the name, address, and taxpayer identification number of each substantial U.S. owner, among other items. This FATCA withholding tax could also affect a Fund’s return on its investments in foreign securities or affect a shareholder’s return if the shareholder holds its Fund shares through a foreign intermediary. You are urged to consult your tax adviser regarding the application of this FATCA withholding tax to your investment in a Fund and the potential certification, compliance, due diligence, reporting, and withholding obligations to which you may become subject in order to avoid this withholding tax.

Each Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that they are not subject to such withholding.

Taxes When Shares are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of substantially identical Shares.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP’s aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP’s basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing “wash sales” (for an AP who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares comprising the Creation Units have been held for more than one year and as a short-term capital gain or loss if such Shares have been held for one year or less.

The Funds may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Funds may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Funds to recognize investment income and/or capital gains or losses that they might not have recognized if they had completely satisfied the redemption in-kind. As a result, the Funds may be less tax efficient if they include such a cash payment in the proceeds paid upon the redemption of Creation Units.

Important Tax Considerations When Purchasing Fund Shares

If you are investing through a taxable account, you should carefully consider the timing of your investment relative to a Fund's distribution schedule. Purchasing Fund shares shortly before a distribution may increase your tax liability, a situation commonly referred to as "buying a dividend."

When a Fund makes a distribution, its share price typically drops by an amount roughly equal to the distribution. As a hypothetical example, if you invest \$5,000 to purchase 250 shares at \$20 per share on December 15, and the Fund pays a \$1 per share distribution on December 16, the share price would adjust to \$19 (ignoring market fluctuations). Although your total investment value remains \$5,000 (250 shares × \$19 in share value plus 250 shares × \$1 distribution), you would owe taxes on the \$250 distribution, even if you reinvest the distribution rather than receiving it in cash.

Distributions are taxable to shareholders even if they are paid from income or gains realized by a Fund before you invested, and even if they were reflected in the purchase price of the shares. Consequently, you may incur taxes on income or gains that accrued before your investment, without corresponding benefit.

Unless you are investing through a tax-advantaged account, such as an IRA or an employer-sponsored retirement plan, you may wish to avoid purchasing Fund shares shortly before a distribution. You can minimize the potential tax impact by reviewing the relevant Fund's distribution schedule prior to investing. When available, information about a Fund's distribution schedule can be found on the Funds' website at www.defianceetfs.com.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to foreign, state, and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION

Foreside Fund Services, LLC, a wholly owned subsidiary of Foreside Financial Group (dba ACA Group) (the "Distributor"), the Fund's distributor, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Funds on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds. The Distributor's principal address is Three Canal Plaza, Suite 100, Portland, Maine 04101.

The Board has adopted a Distribution (Rule 12b-1) Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, each Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year to pay distribution fees for the sale and distribution of its Shares.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of Funds' assets on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often Shares traded on the Exchange at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of the Funds can be found on the Funds' website at www.defianceetfs.com.

When available, information regarding the number of days in the prior six months that a Fund failed to provide the sought after leveraged returns (subject to a de minimis threshold) as well as the highest positive and negative variances during the period can be found on the Funds' website at www.defianceetfs.com.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which

Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser and the Funds make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in any Fund particularly.

The Third Amended and Restated Declaration of Trust (“Declaration of Trust”) provides a detailed process for the bringing of derivative or direct actions by shareholders in order to permit legitimate inquiries and claims while avoiding the time, expense, distraction, and other harm that can be caused to a Fund or its shareholders as a result of spurious shareholder demands and derivative actions. Prior to bringing a derivative action, a demand by three unrelated shareholders must first be made on a Fund’s Trustees. The Declaration of Trust details various information, certifications, undertakings and acknowledgments that must be included in the demand. Following receipt of the demand, the trustees have a period of 90 days, which may be extended by an additional 60 days, to consider the demand. If a majority of the Trustees who are considered independent for the purposes of considering the demand determine that maintaining the suit would not be in the best interests of the Funds, the Trustees are required to reject the demand and the complaining shareholders may not proceed with the derivative action unless the shareholders are able to sustain the burden of proof to a court that the decision of the Trustees not to pursue the requested action was not a good faith exercise of their business judgment on behalf of the Funds. The Declaration of Trust further provides that shareholders owning Shares representing no less than a majority of the Funds’ outstanding shares must join in bringing the derivative action. If a demand is rejected, the complaining shareholders will be responsible for the costs and expenses (including attorneys’ fees) incurred by the Funds in connection with the consideration of the demand, if a court determines that the demand was made without reasonable cause or for an improper purpose. If a derivative action is brought in violation of the Declaration of Trust, the shareholders bringing the action may be responsible for the Funds’ costs, including attorneys’ fees, if a court determines that the action was brought without reasonable cause or for an improper purpose. The Declaration of Trust provides that no shareholder may bring a direct action claiming injury as a shareholder of the Trust, or any Funds, where the matters alleged (if true) would give rise to a claim by the Trust or by the Trust on behalf of the Funds, unless the shareholder has suffered an injury distinct from that suffered by the shareholders of the Trust, or the Funds, generally. Under the Declaration of Trust, a shareholder bringing a direct claim must be a shareholder of the Funds with respect to which the direct action is brought at the time of the injury complained of or have acquired the shares afterwards by operation of law from a person who was a shareholder at that time. The Declaration of Trust further provides that the Funds shall be responsible for payment of attorneys’ fees and legal expenses incurred by a complaining shareholder only if required by law, and any attorneys’ fees that the Funds are obligated to pay shall be calculated using reasonable hourly rates. These provisions do not apply to claims brought under the federal securities laws.

The Declaration of Trust also requires that actions by shareholders against the Funds be brought exclusively in a federal or state court located within the State of Delaware. This provision will not apply to claims brought under the federal securities laws. Limiting shareholders’ ability to bring actions only in courts located in Delaware may cause shareholders economic hardship to litigate the action in those courts, including paying for travel expenses of witnesses and counsel, requiring retaining local counsel, and may limit shareholders’ ability to bring a claim in a judicial forum that shareholders find favorable for disputes, which may discourage such actions.

FINANCIAL HIGHLIGHTS

This section would ordinarily include Financial Highlights. The Financial Highlights table is intended to help you understand the Funds’ performance for their periods of operations. Because the Funds have not yet completed their initial fiscal period as of the date of this Prospectus, no Financial Highlights are shown.

Investors may find more information about the Funds in the following documents:

Statement of Additional Information: The Funds' SAI provides additional details about the investments of each Fund and certain other additional information. A current SAI dated June 17, 2025, as supplemented from time to time, is on file with the SEC and is herein incorporated by reference into this Prospectus. It is legally considered a part of this Prospectus.

Annual/Semi-Annual Reports: Additional information about the Funds' investments will be available in the Funds' annual and semi-annual reports to shareholders and in Form N-CSR. In the annual report you will find a discussion of the market conditions and investment strategies that significantly affected each Fund's performance after the first fiscal year each Fund is in operation. In Form N-CSR, you will find the Fund's annual and semi-annual financial statements after the first fiscal year each Fund is in operation.

You can obtain free copies of these documents, when available, request other information or make general inquiries about the Funds by contacting the Funds at the Defiance ETFs, c/o U.S. Bank Global Fund Services, P.O. Box 701, Milwaukee, Wisconsin 53201-0701 or calling 833-333-9383.

Shareholder reports and other information about the Funds are also available:

- Free of charge from the SEC's EDGAR database on the SEC's website at www.sec.gov; or
- Free of charge from the Funds' Internet website at www.defianceetfs.com; or
- For a fee, by e-mail request to publicinfo@sec.gov.

The SAI and other information are also available from a financial intermediary (such as a broker-dealer or bank) through which each Fund's shares may be purchased or sold.
